Project Name: "Smart Luggage Searching..."  Academic Year: "2017/2018..."

Group Members: "Kristina Darawshe..."  Department Name: "Computer Engineering"

"Silena Hassounah..."

Supervisor Name: "Dr. Hanal Abu-Zant..."

Issues no. PA-1/1/1
Project’s Summary:

People love to travel a lot, and visiting new places is a challenge in itself. The conditions they face are often difficult, and one of the problems they encounter is that airport personnel, as engineers, need to inspect their bags and luggage at each airport or point of transit. This is because they need to check for security reasons.

In this project, we are developing an RFID technology that will help to make the process of identifying bags and luggage easier for both travelers and airport personnel. The idea is to make the journey of passengers easier by using RFID technology.
