

# Student Behavior Tracking System "SBTS"

Prepared by: Aya Yamin , Ahlam Kharrousheh

Supervisor: Dr. Manar Qamhieh

## Introduction

The organization of the educational process in Palestinian schools require time and effort , therefore SBTS allows for :

1. The principal of school to organize the school affairs .
2. Teachers to track their classes as fast as possible.
3. Parents to early know the level of achievement of their children .
4. Students to track their educational level.

## Main Features

- Adding the structure of course in system such as new classes ,new students , new teachers ,new activities,...

- 
- Dynamic rating for students based on their performance assigned by teachers (point system either in exams or activities)

- 
- Complete report system available for principal of school in forms of graphs and reports for tracking purposes.

- 
- Notification system for parents about students performance.

## Techniques

The Website and Mobile Application are developed using new trending development frameworks such as :

- React JS for FrontEnd , php7 MySql DataBase for BackEnd with XAMPP Server for Website.
- Android , using Java for FrontEnd , php7 MySql DataBase for BackEnd with XAMPP Server for Mobile Application .

## Constraints

- Learning ReactJS and dealing it with php mySql.
- Time.

## Future Work

- Notify Parents with SMS messages.
