Introduction

Problem

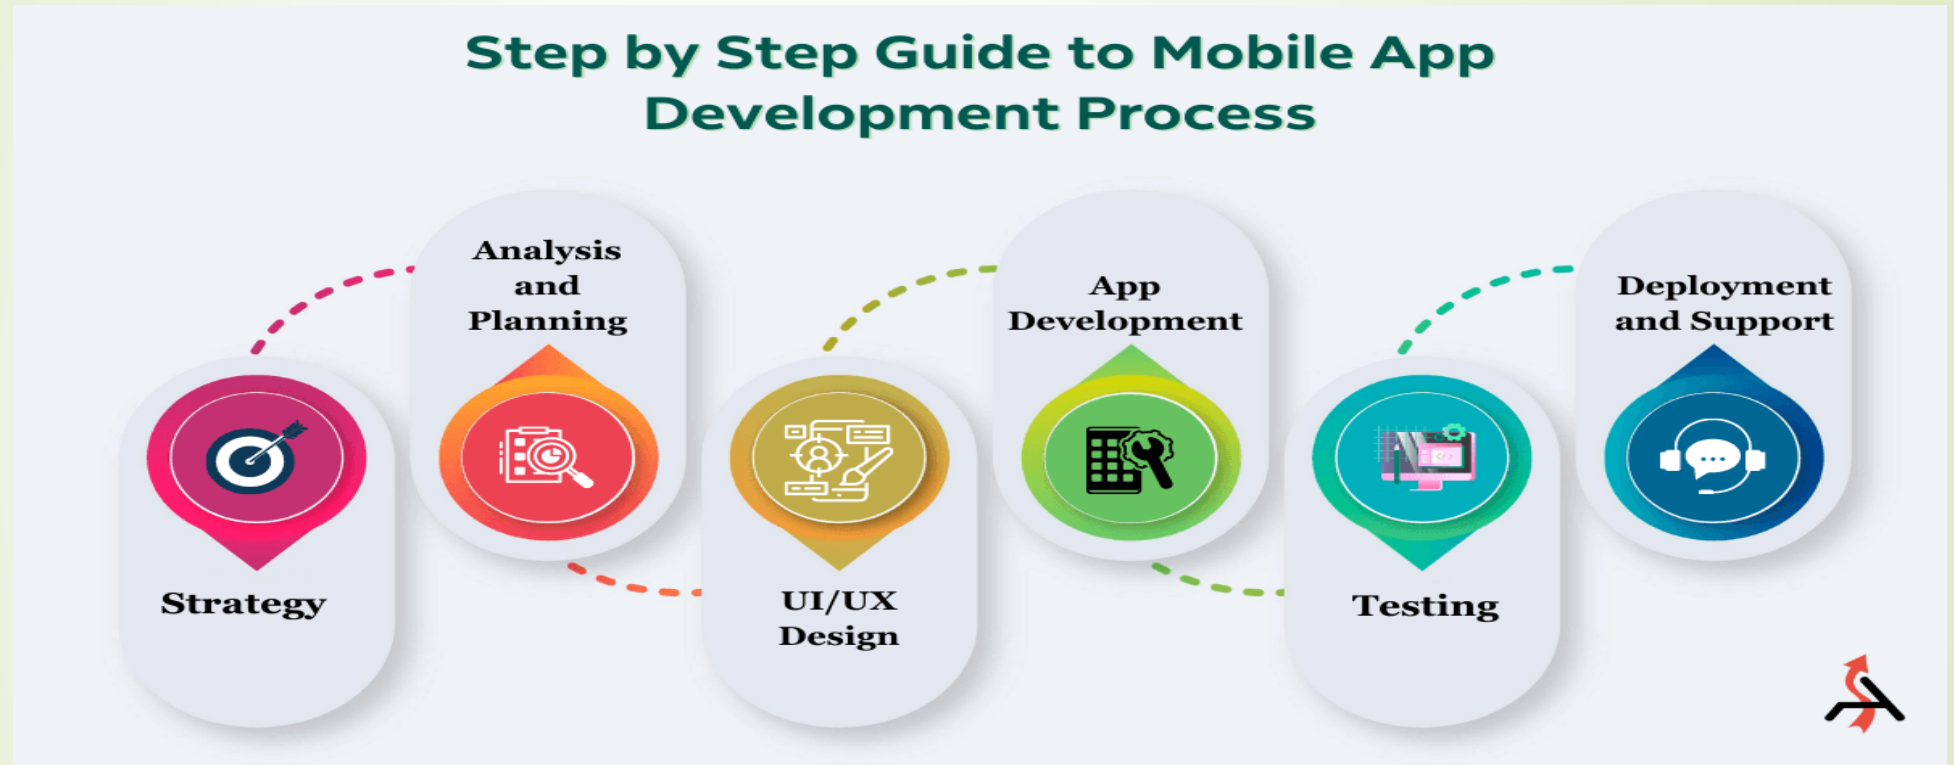

This app gives a solution for people who love traveling and share their experience with others, tourists usually have to communicate with local people who may speak different languages. Moreover, tourists like to have someone to describe for them the places they visit. However, you don't have this guy all the time, so use text-to-speech to describe anything for you .

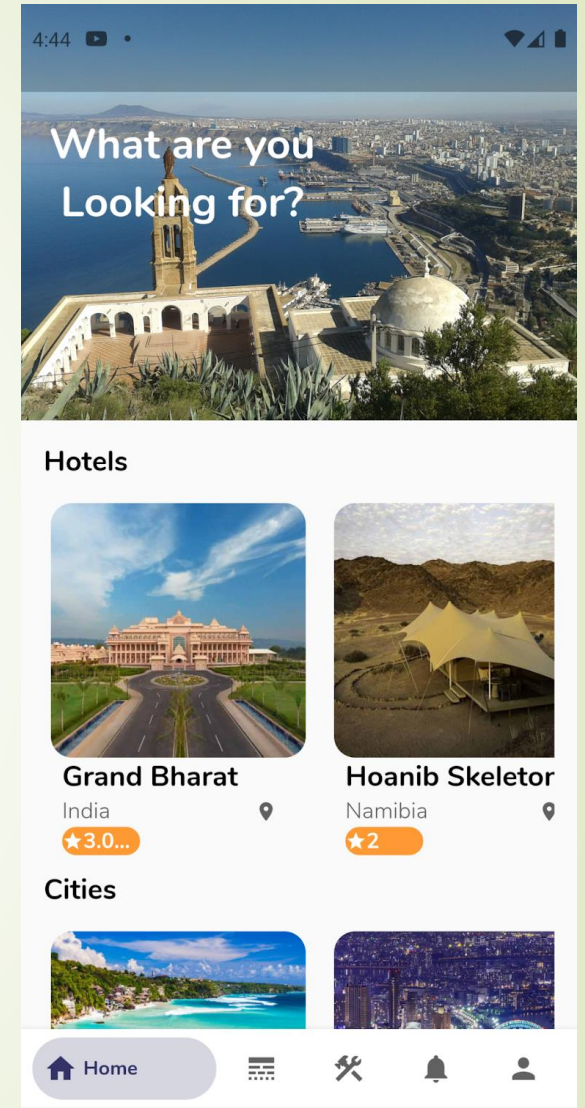

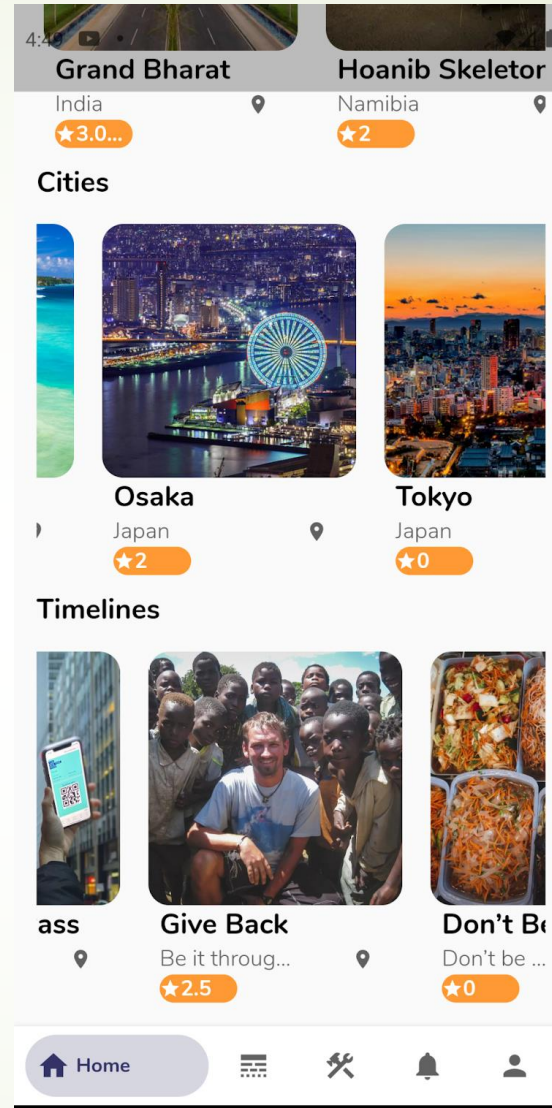

Objectives

- The project aims to find a way for people to share their traveling experience and see others' experiences, comment and like other people's posts and create their own posts. Live streaming provided so people can share their experience in real time .
