

Indoor prevention suffocation system

Dr.Luai Malhis

Hamza Dmaide and Dania Aqel

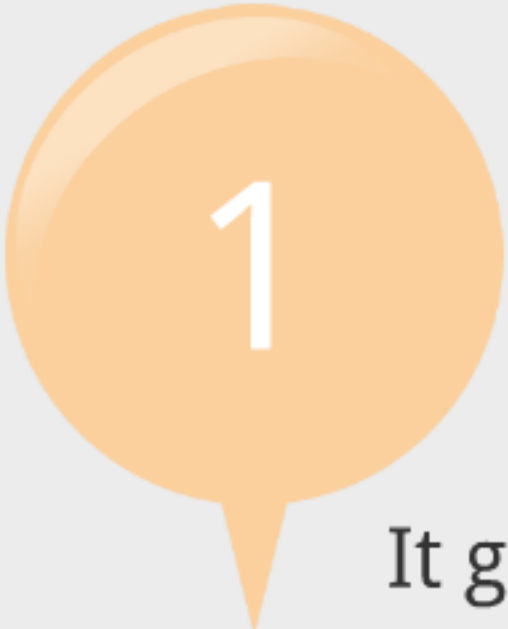

It's a hardware system to save children whose parents forget them in cars from suffocation

IPSS

It's a hardware system to save children whose parents forget them in cars from suffocation

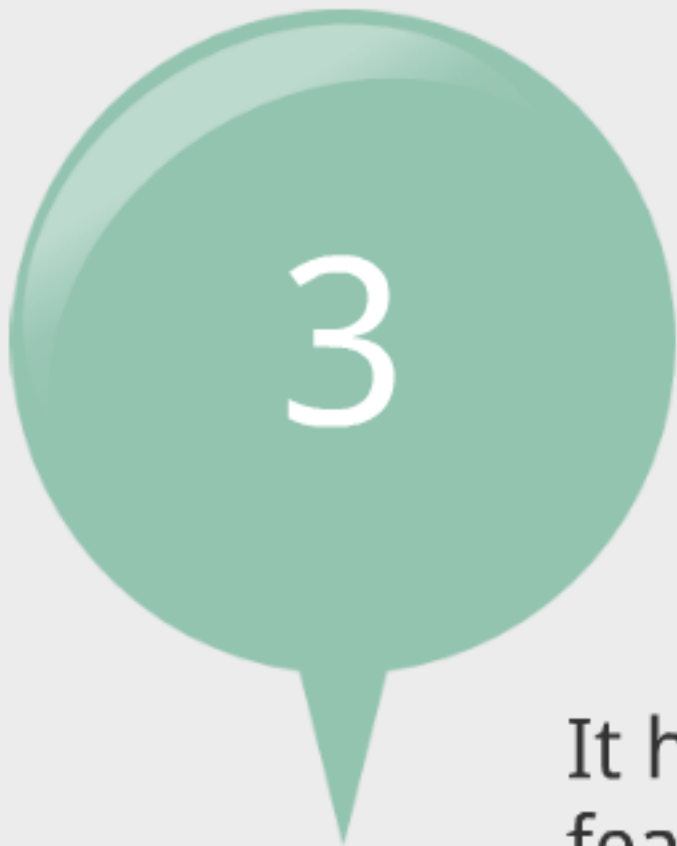

# Motivation

It gives a guarantee to saves children's lives from suffocation

Safe

It has many new features

# How does it works?

The system checks if there's a danger, there are four main cases:

Increase temperature and there's child movement.

Increase temperature and there's child sound

Increase Co2 gas proportion and there's child sound

Increase Co2 gas proportion and there's child movement

# How does it works?

---

The system solve the problem using four steps:

---

Call the parents  
phone

Open the window

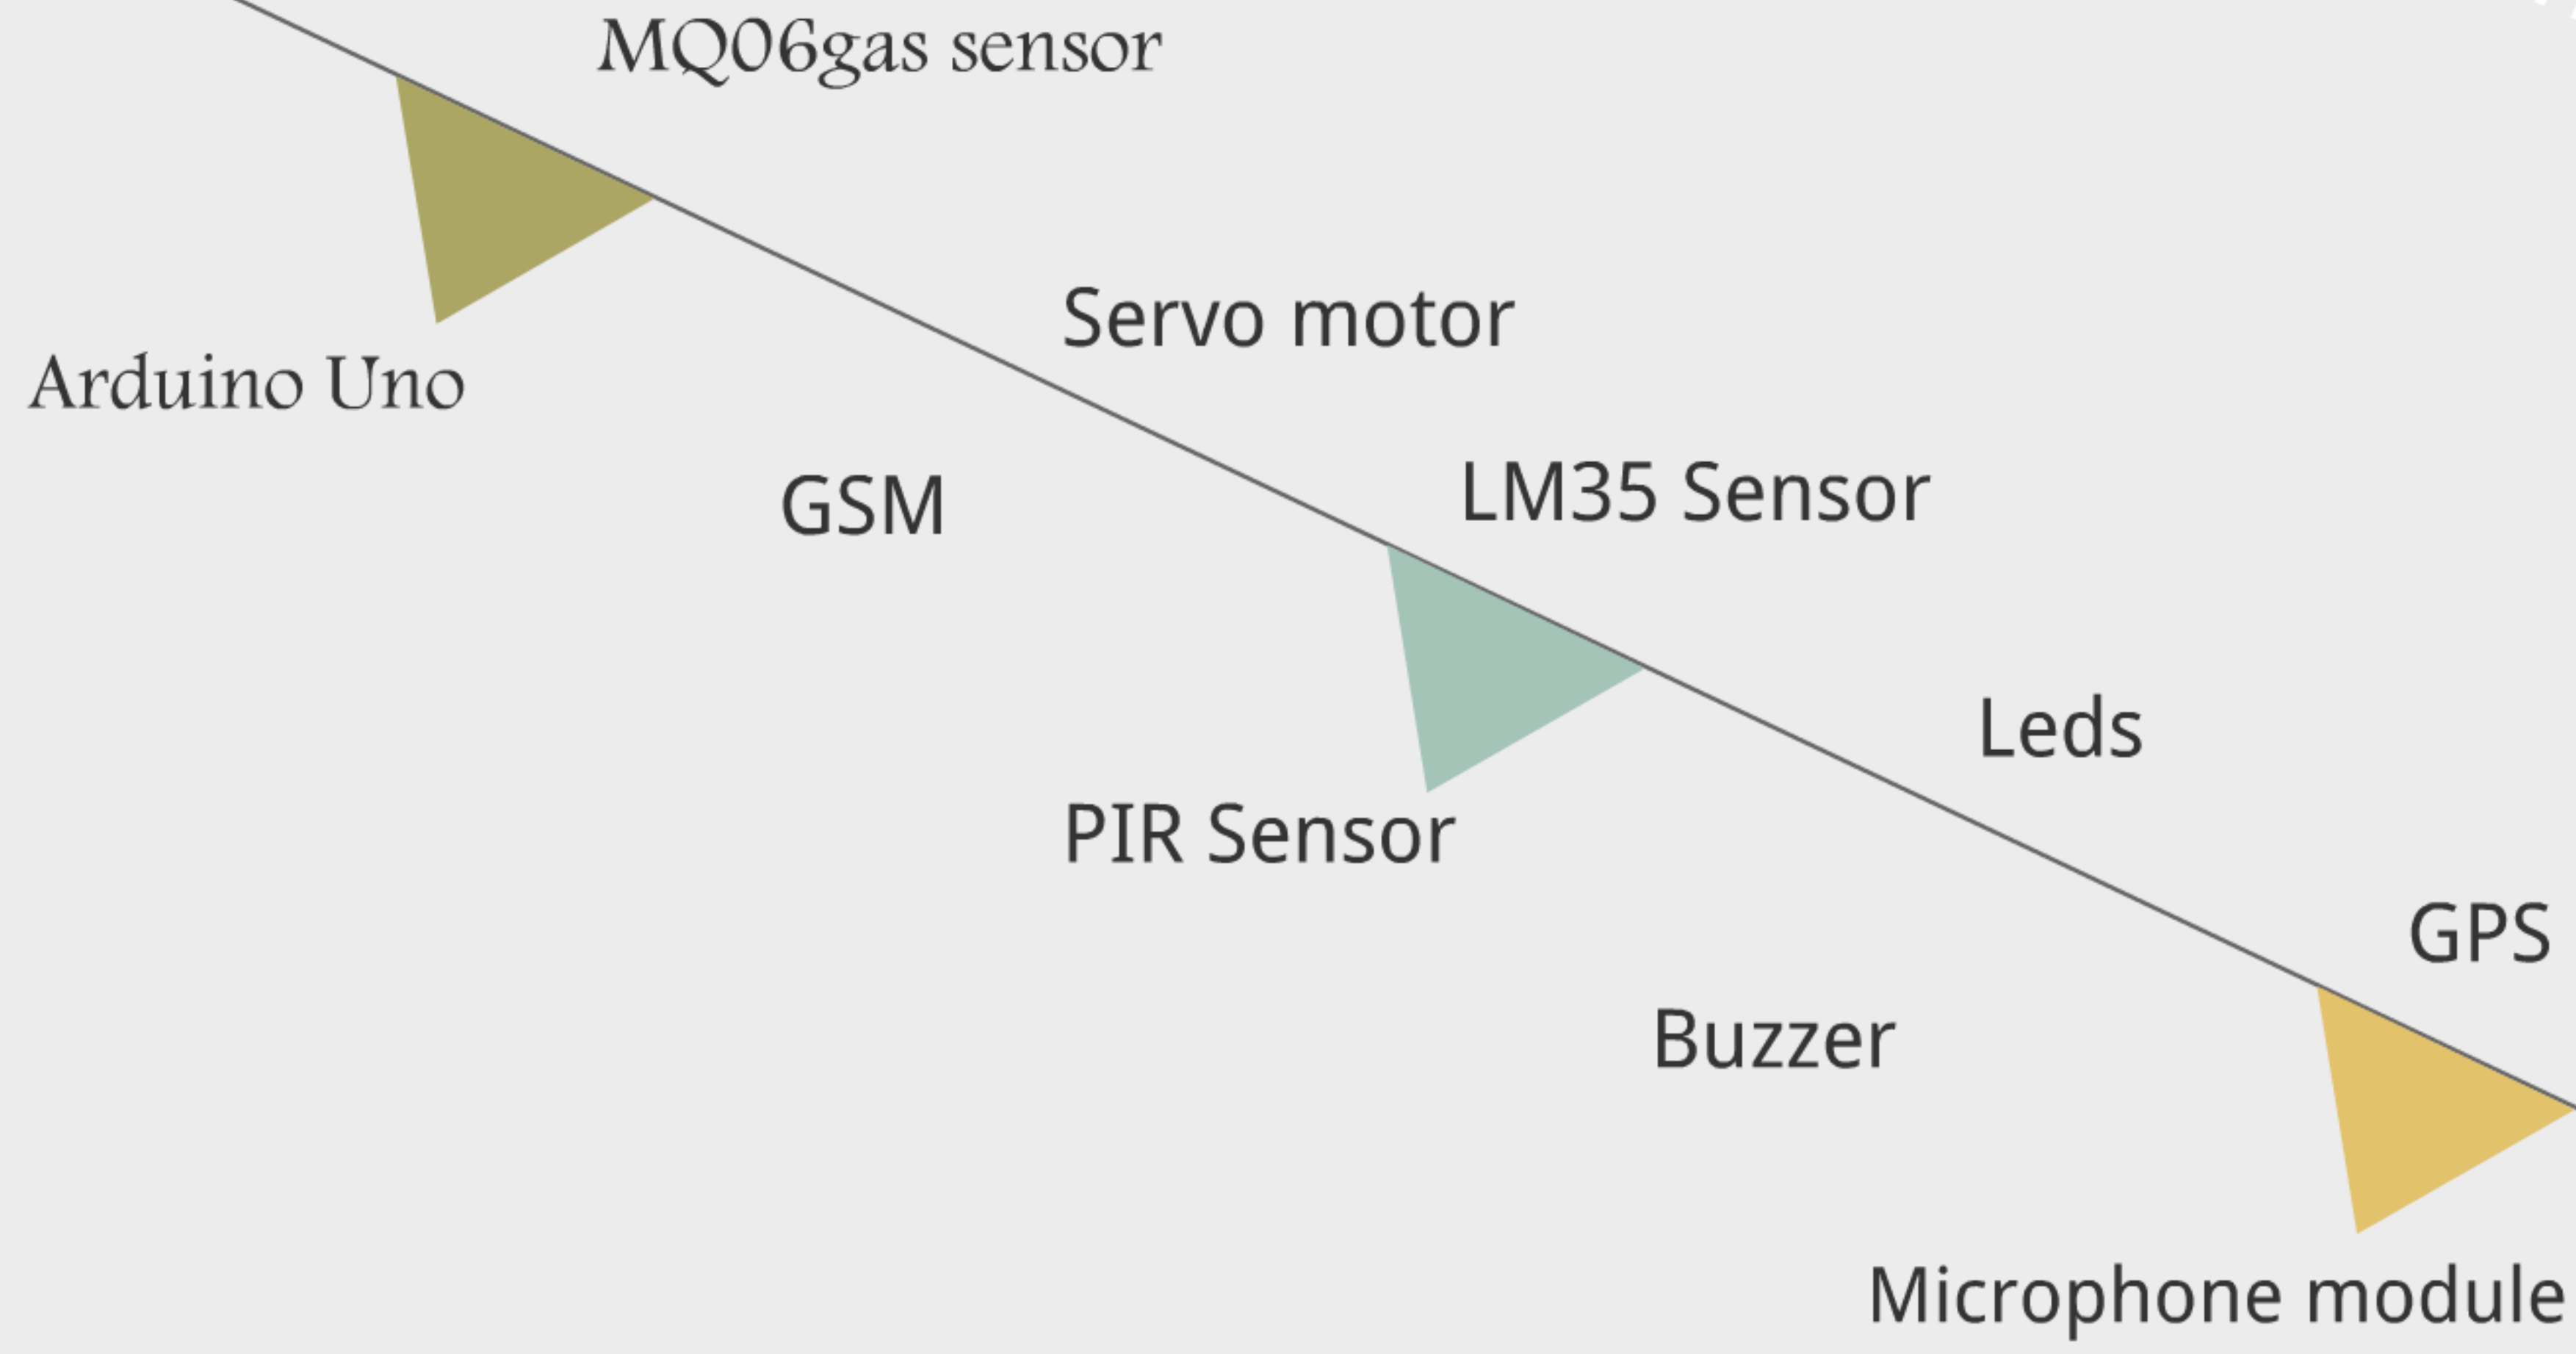

Turn on the car  
alarm

Send message  
with car location  
to civil defines

# Equipments

Find idea

very precise work

Covid-19 pandemic

**Constraints**

Future  
work

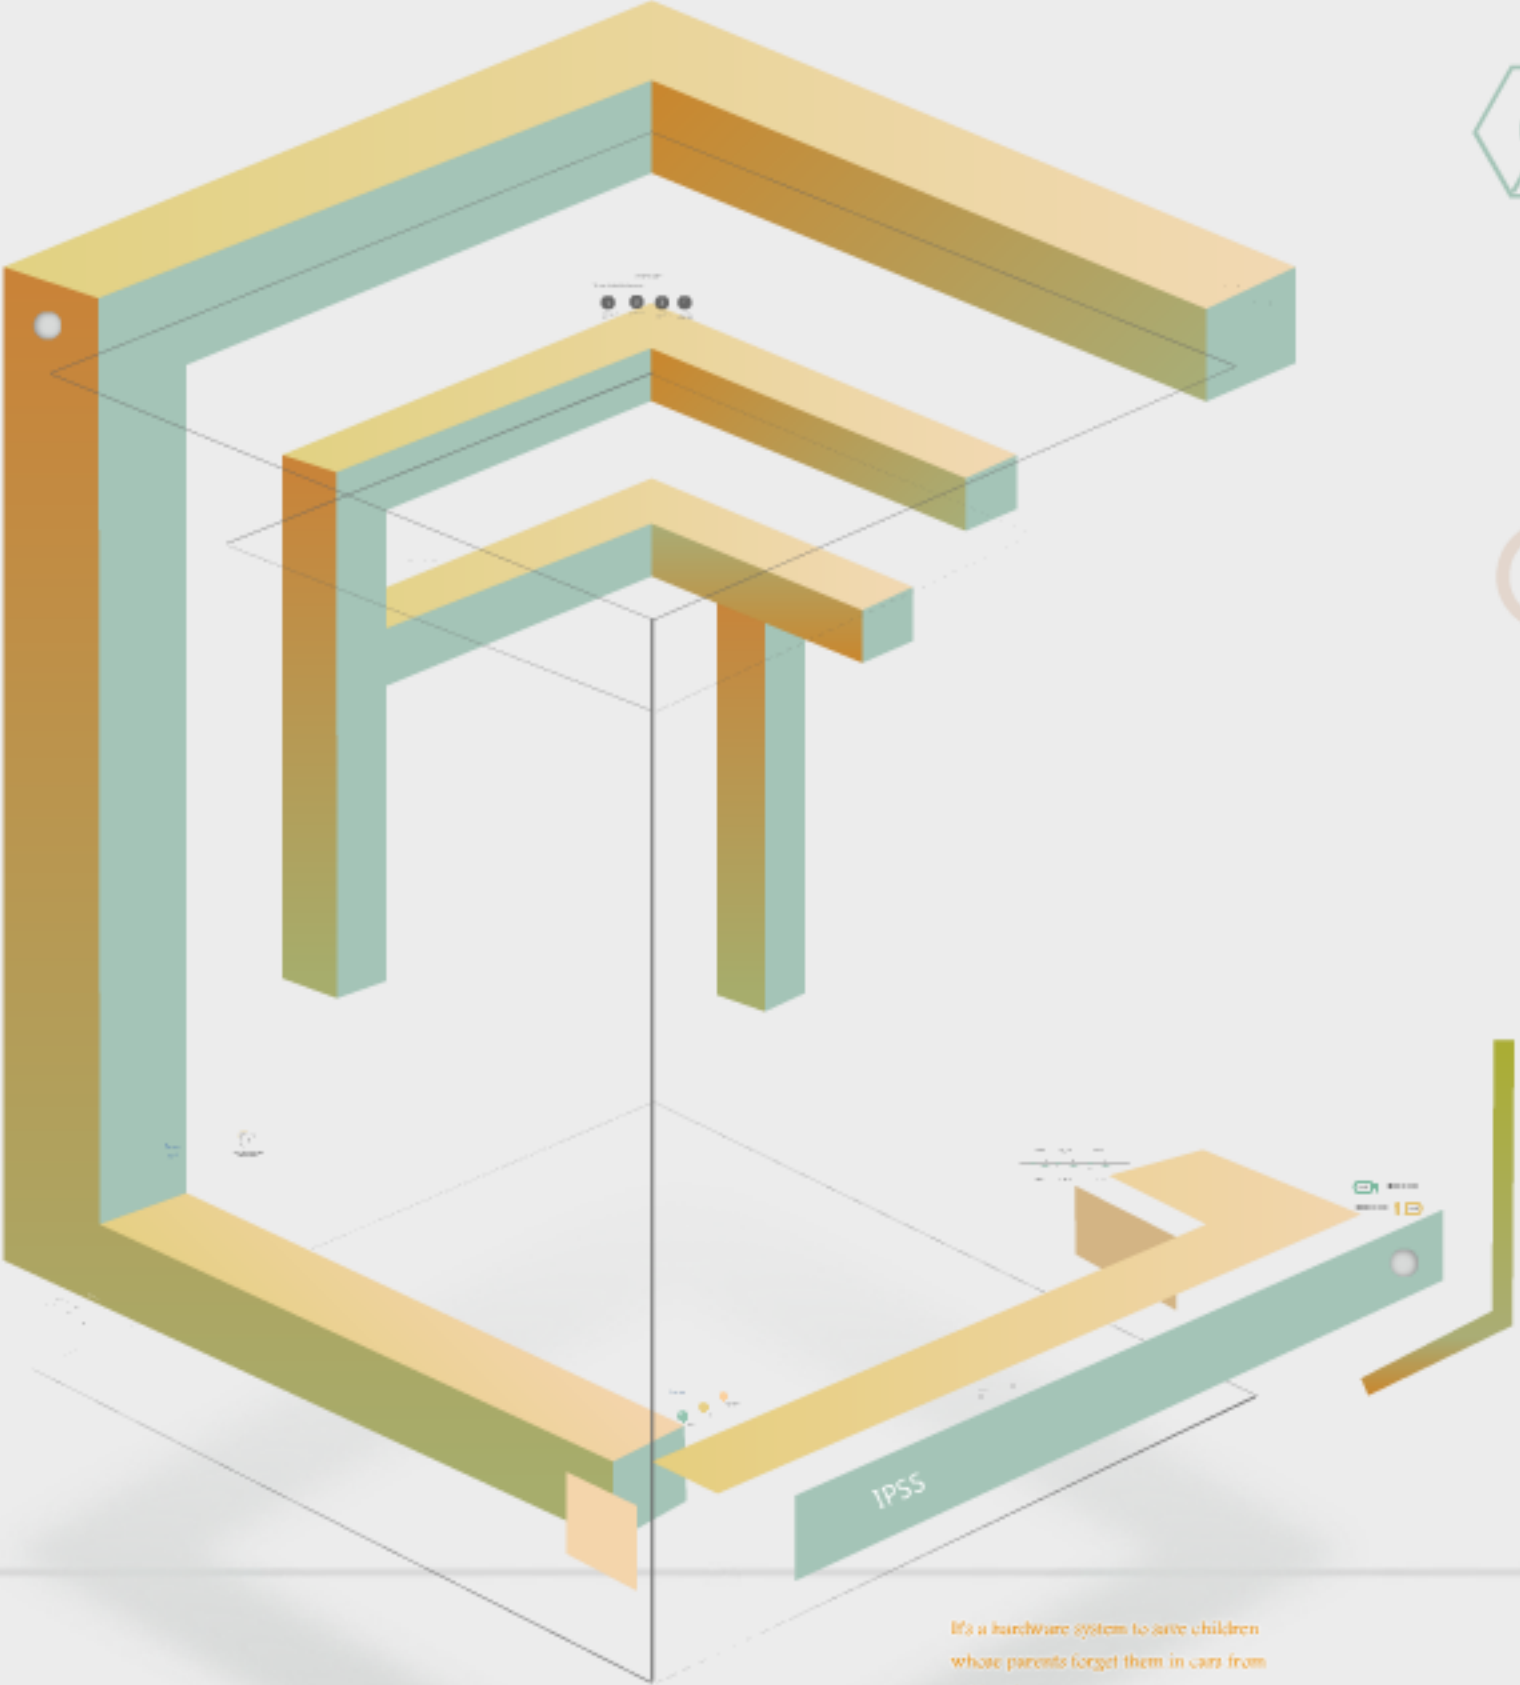

Add music and sound when  
theres no danger.
