Project title : Beauty App."صالوناتى"

Academic Year: 2022

Group Members: 1- Nada Abushanab

Department Name: Computer Engineering.

2- Noura Darwazeh.

Project Type Software or Hardware (Choose one) → **Software**

Supervisor Name: Muhannad Aljabi

Format:

- Single space, Times New Roman.
- 12 pt,
- Maximum 1 page.

Abstract Body:

Items must be provided in the Abstract:

- Why do you think this project is important? Please explain the significance of this Project in brief.
- In your point of view what are the important aspects that should be covered in the project?
- Objective(s): In your view, please explain the main objectives of the project.
- Methodology: Give a brief outline of the application development process.
- Had this project been done before? Are there any similar applications available today?
- **Note:** Please deliver this abstract early to ensure that your Project has been approved by the department's projects committee. **Registration will not be done without this approval.**

Project's Abstract:

Buying in Palestine is not an easy process. The buyer may want to buy a specific product from another city or from a far place. This requires the buyer to go to the place where the product is sold and he may not be able to find what suits him and this seems difficult, and as a person may want to go to a particular beauty center and when he goes, he finds many people before him, and this pushes him to wait and waste time, and he may not be able to do what he wants due to the crisis and lack of time.

In our project, we are interested in providing a convenient and easy way for people so that they can see a lot of beauty centers in different cities and see the services they provide inside the center and the products for sale. We help people who want to buy the cosmetics that suit them from the beauty center they want without having to go to the sales places and waste their time searching for the products that suit them. They can see all the products available in the various centers and buy their products instead of going to the places where they do not find their needs, and we also help people who want to book in a particular beauty center to get certain beauty services for hair, skin and others, where the customer chooses the appropriate date, to avoid a crisis and a loss of people's time, and in our application we help the owners of beauty centers to display their products, and their working hours to provide their cosmetic services, and this also gives them an opportunity to get to know the names of their centers.

. Our application includes a number of beauty centers in different cities, beauty centers are grouped and presented with the services they provide. This application also provides the experience of viewing and purchasing from beauty centers in an easy and friendly way for the user, and also provides the user with offers. Another thing that comes in handy is that aside from browsing and seeing what suits the user's interests is that with one click the product is delivered home, and payment is done when the product is received, and user is allowed to book a specific appointment in a particular beauty center.

When studying current examples of similar ideas, we might look at Salon, It is an application that displays a group of salons and their available working hours without allowing salon owners to display and sell their products.

Our project mainly focuses on beauty centers that sell beauty products for hair, skin, etc. rather than the products themselves, which means that the customer can look at different items from the same beauty center that may interest him, unlike other applications and websites that provide display of products that are similar to the product they are looking for they originally searched for it, and also focused on pre-booking by the user in a particular beauty center.
