

**Graduation Project II**

**Design of Northern Part  
of  
Nablus Ring Road**

***Deyaa Y. Jararaa    &    Hadeel F. Talahmeh***  
***Dr. Amjad Issa***

The logo of the University of Nablus is a circular emblem. It features a central eagle with spread wings, perched on a globe. Above the eagle, the Arabic text 'النجاح الوطنية' (National Success) is written in a semi-circle. Below the eagle, the year '١٩٧٤' (1974) is inscribed. The emblem is surrounded by several concentric circles in blue, yellow, and green. Four colored circles (orange, blue, grey, and yellow) are positioned at the top of the emblem, and three small black dots are at the bottom.

# DESIGN OF NORTHERN PART OF NABLUS RING ROAD

• Conclusions & Recommendations

## GENERAL BACKGROUND

**Nablus** city is one of the most important Palestinian cities to its existence in the middle of the West Bank as a link between other cities.

# NABLUS

University

Governmental

Health

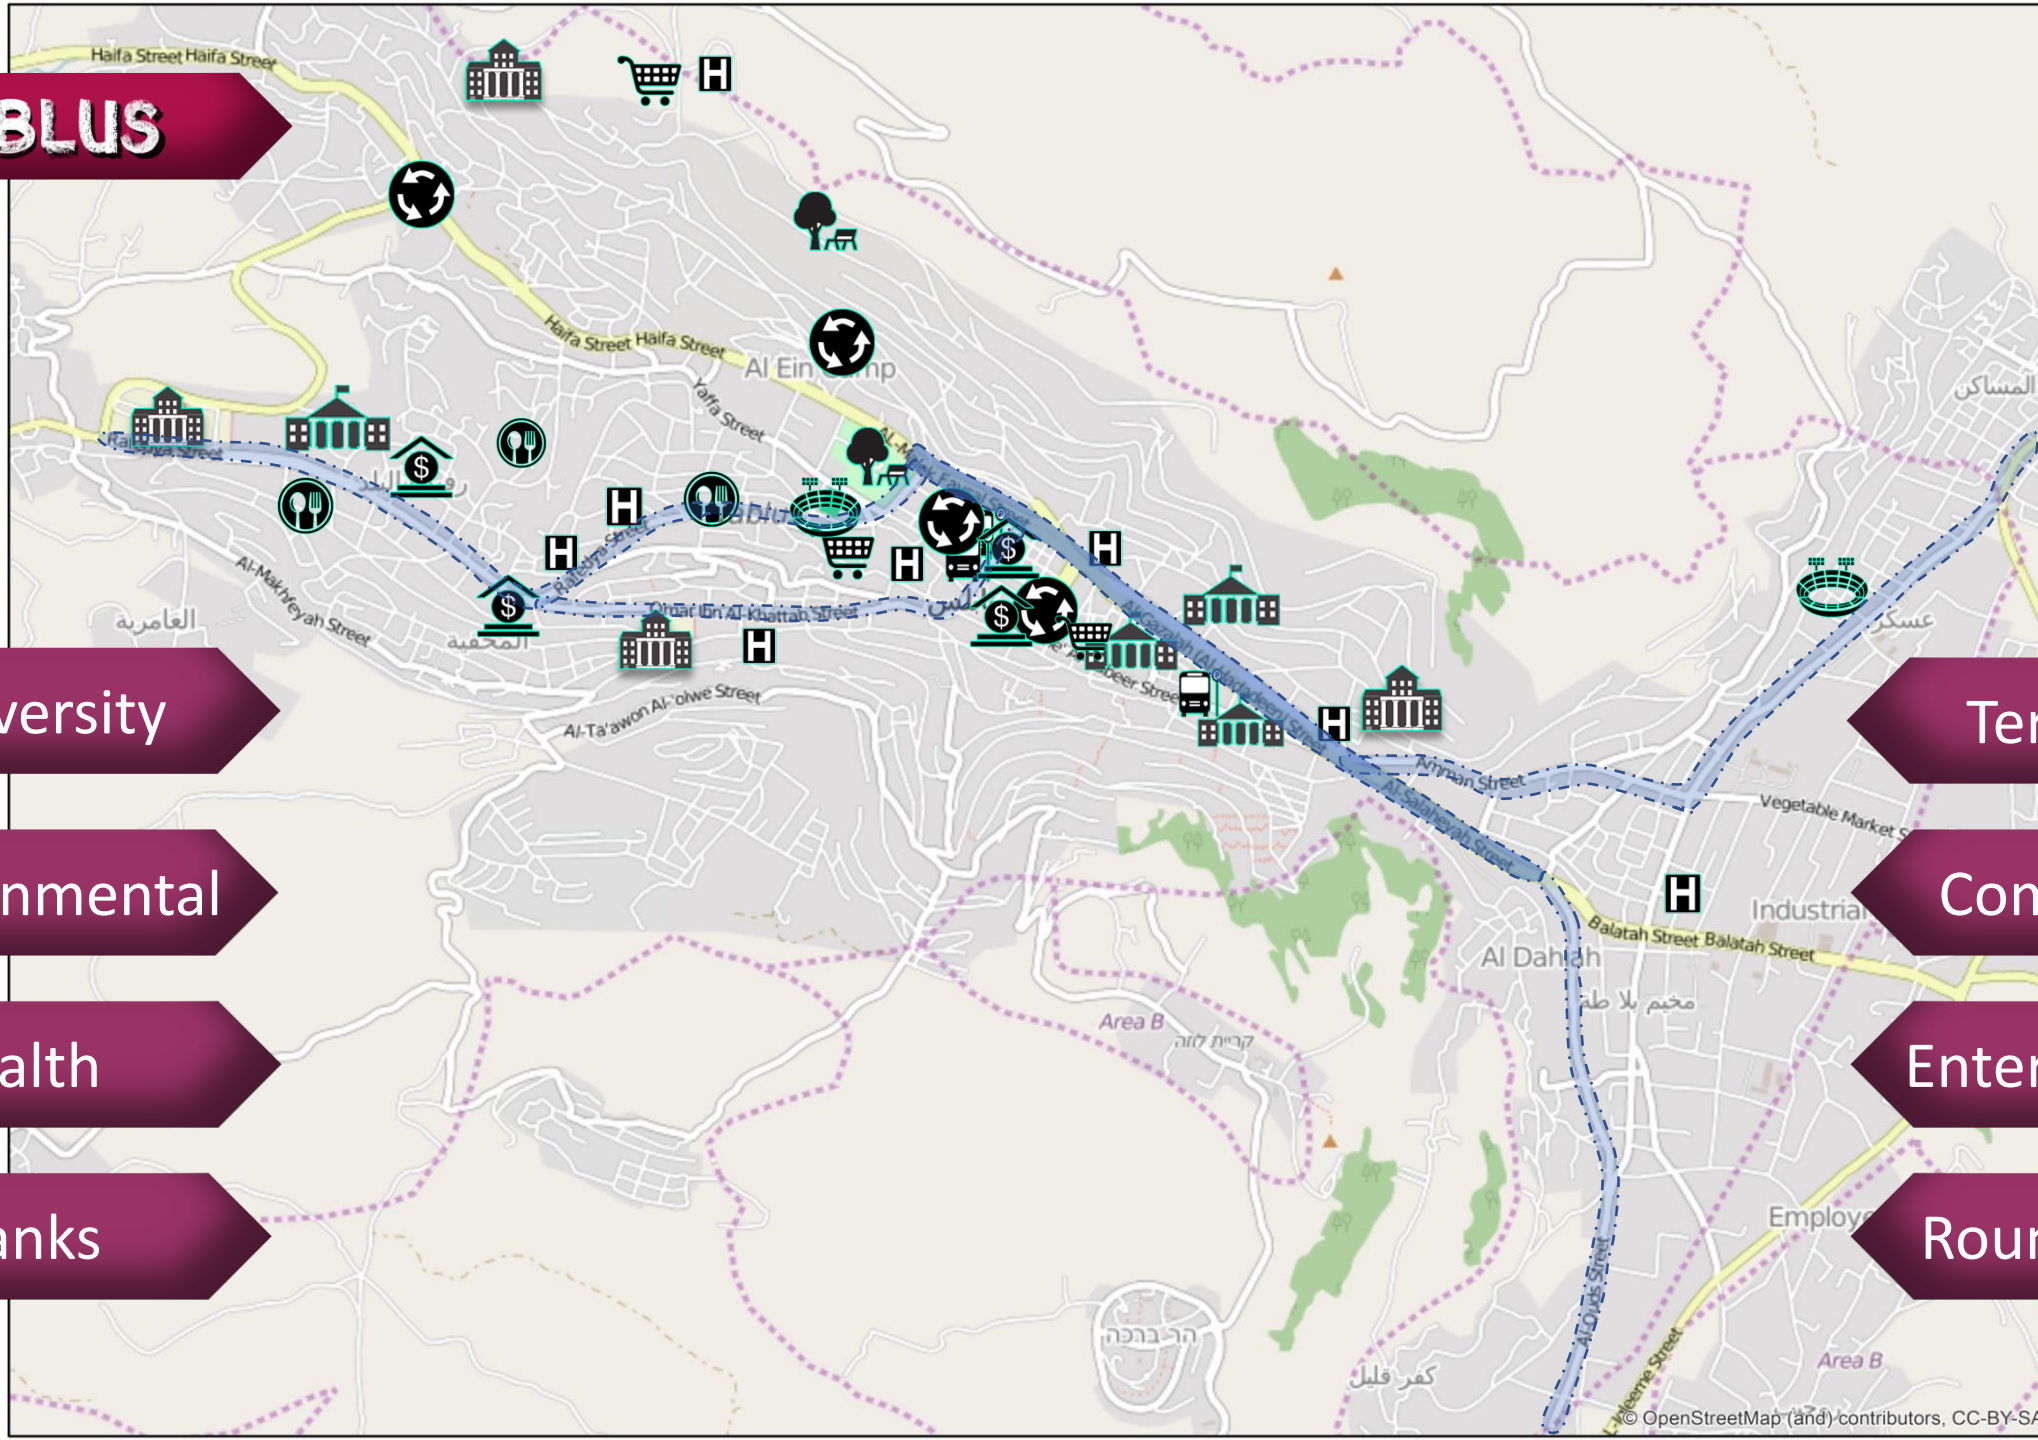

Banks

Terminals

Commercial

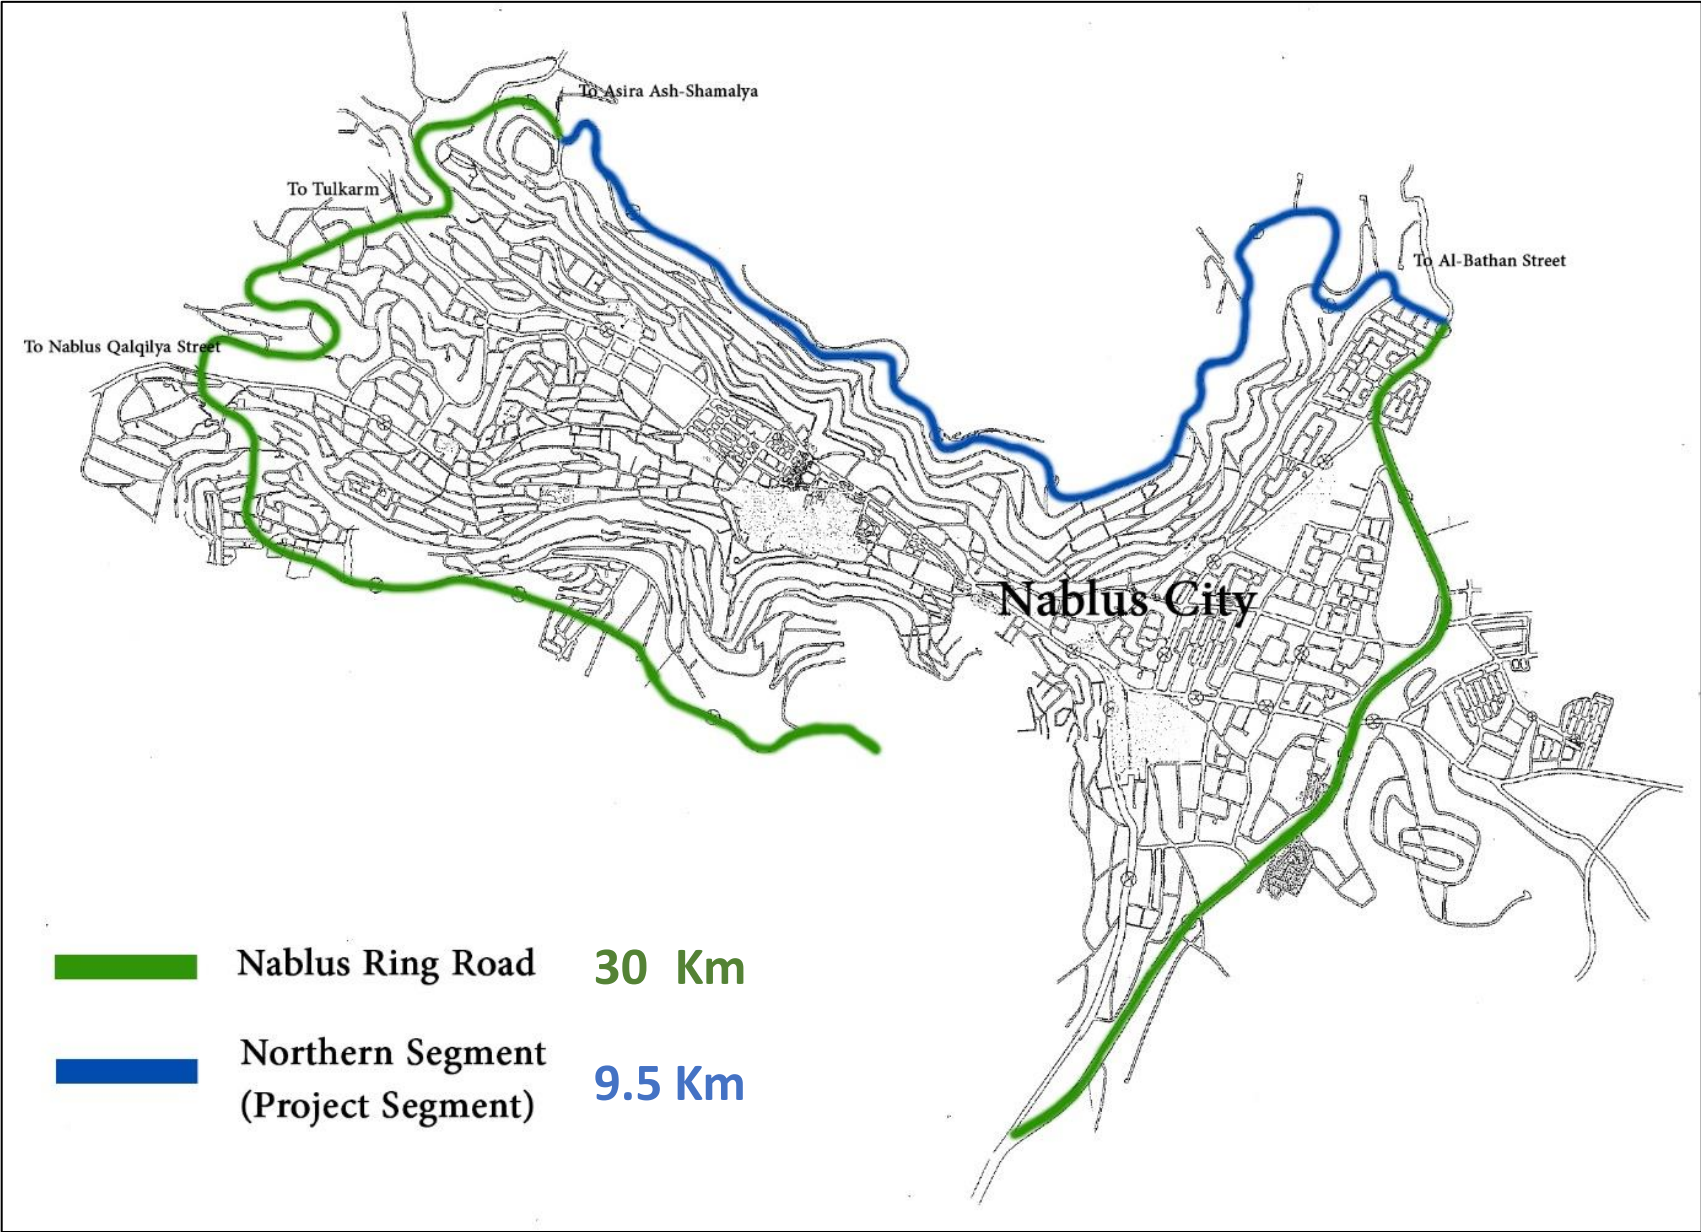

Entertainment

Roundabouts

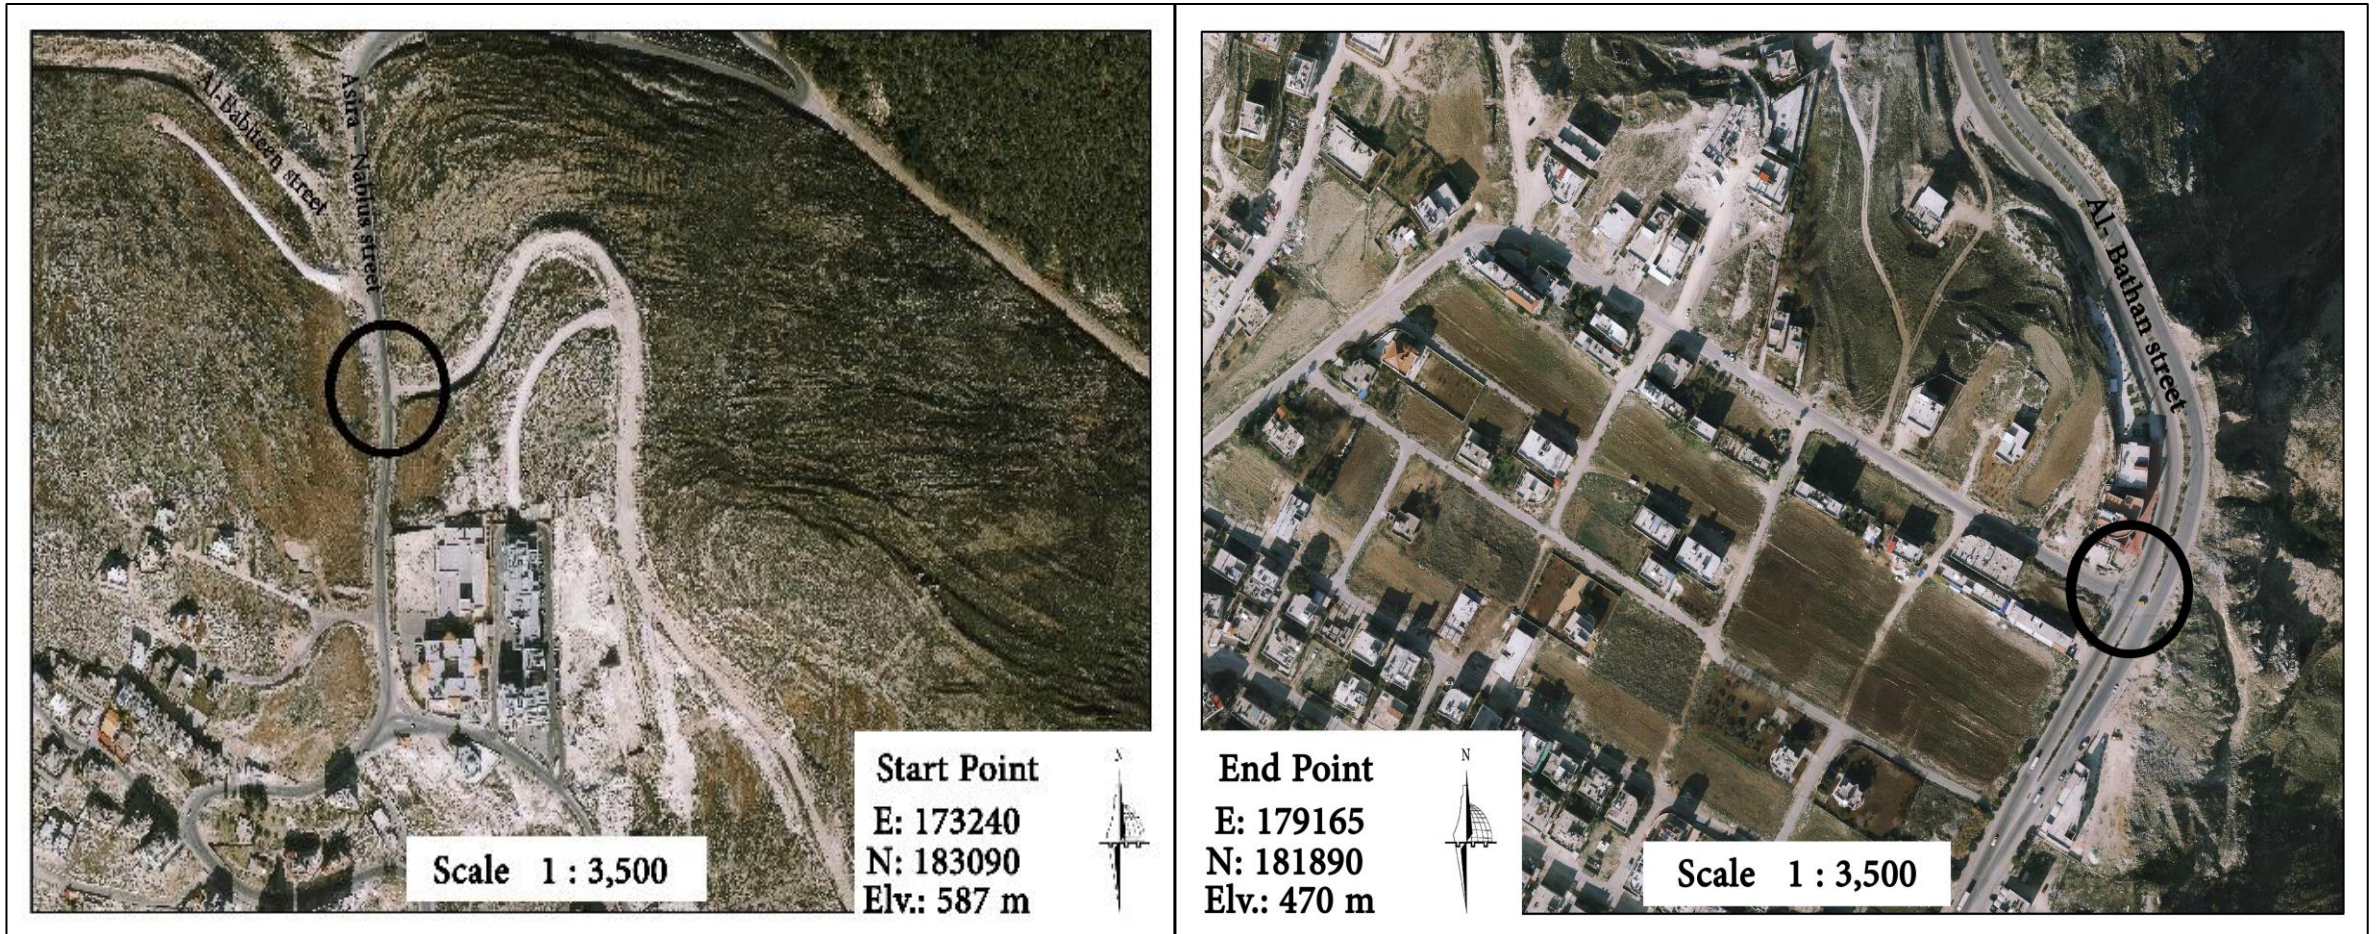

# Schematic Map of Nablus City and the location of Ring Road

# Aerial Photos for the Entrance and Exit of the road.

# OBJECTIVE

- 1 • Evaluate Existing Road
- 2 • Propose Road Design
- 3 • Design of Road Facilities
- 4 • Quantities & Costs Estimated

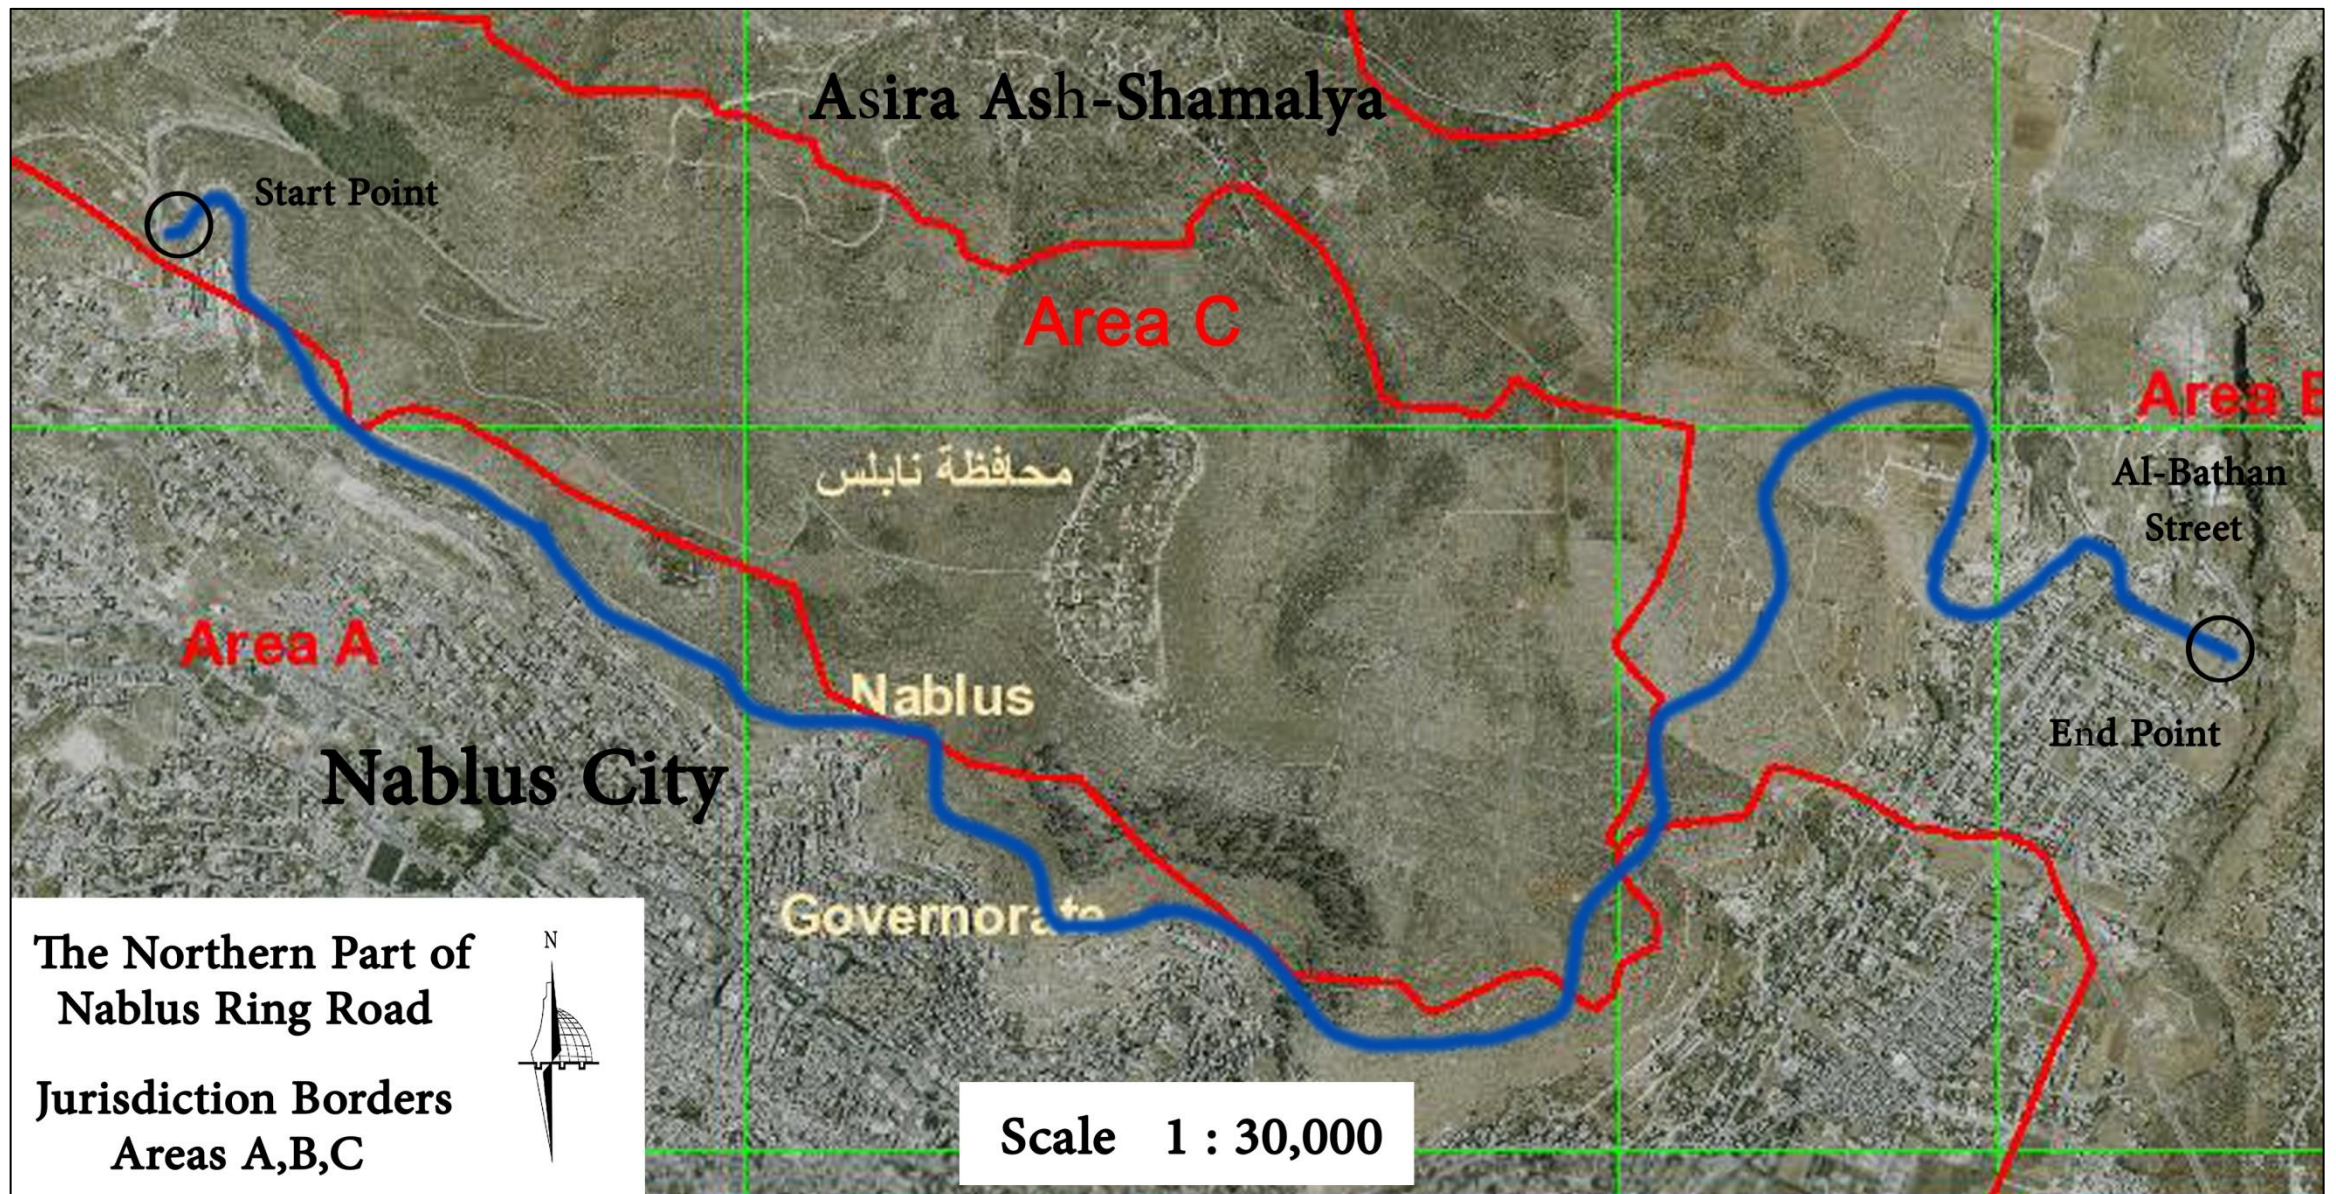

# EVALUATING

# ENTRANCE

Proposed Entrance

Existing Entrance

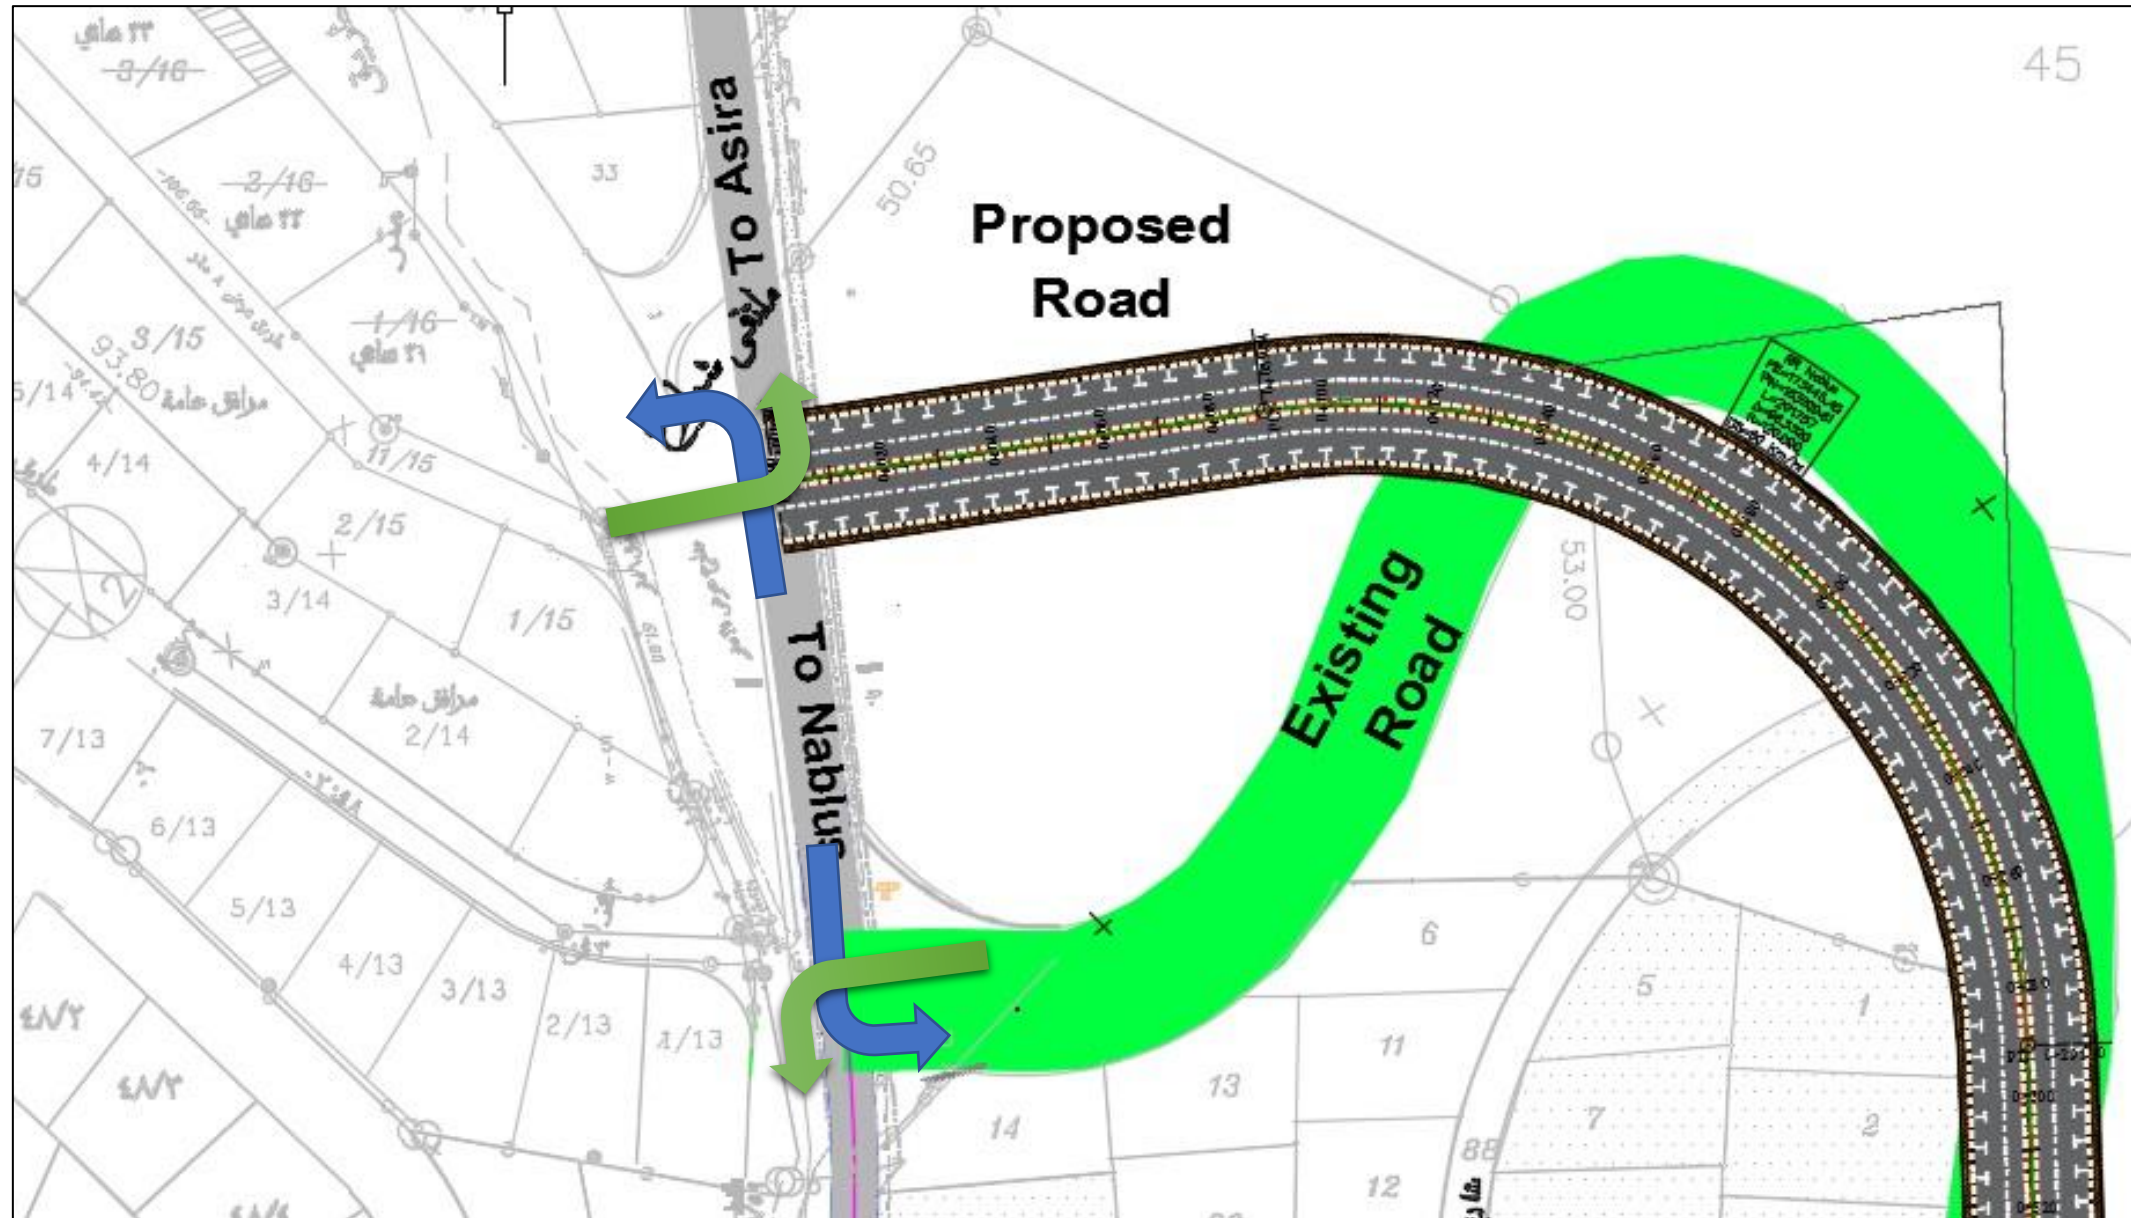

Al-Babitain Road

# ENTRANCE

## Project Steps

### Data Collection

- Collect Relevant Maps.
- Study Area and Reconnaissance Visit.
- Prepared References.
- Traffic Count.
- CBR Tests for Subgrade.

### Design Criteria

- Design Speed.
- Design Vehicle.
- Superelevation.

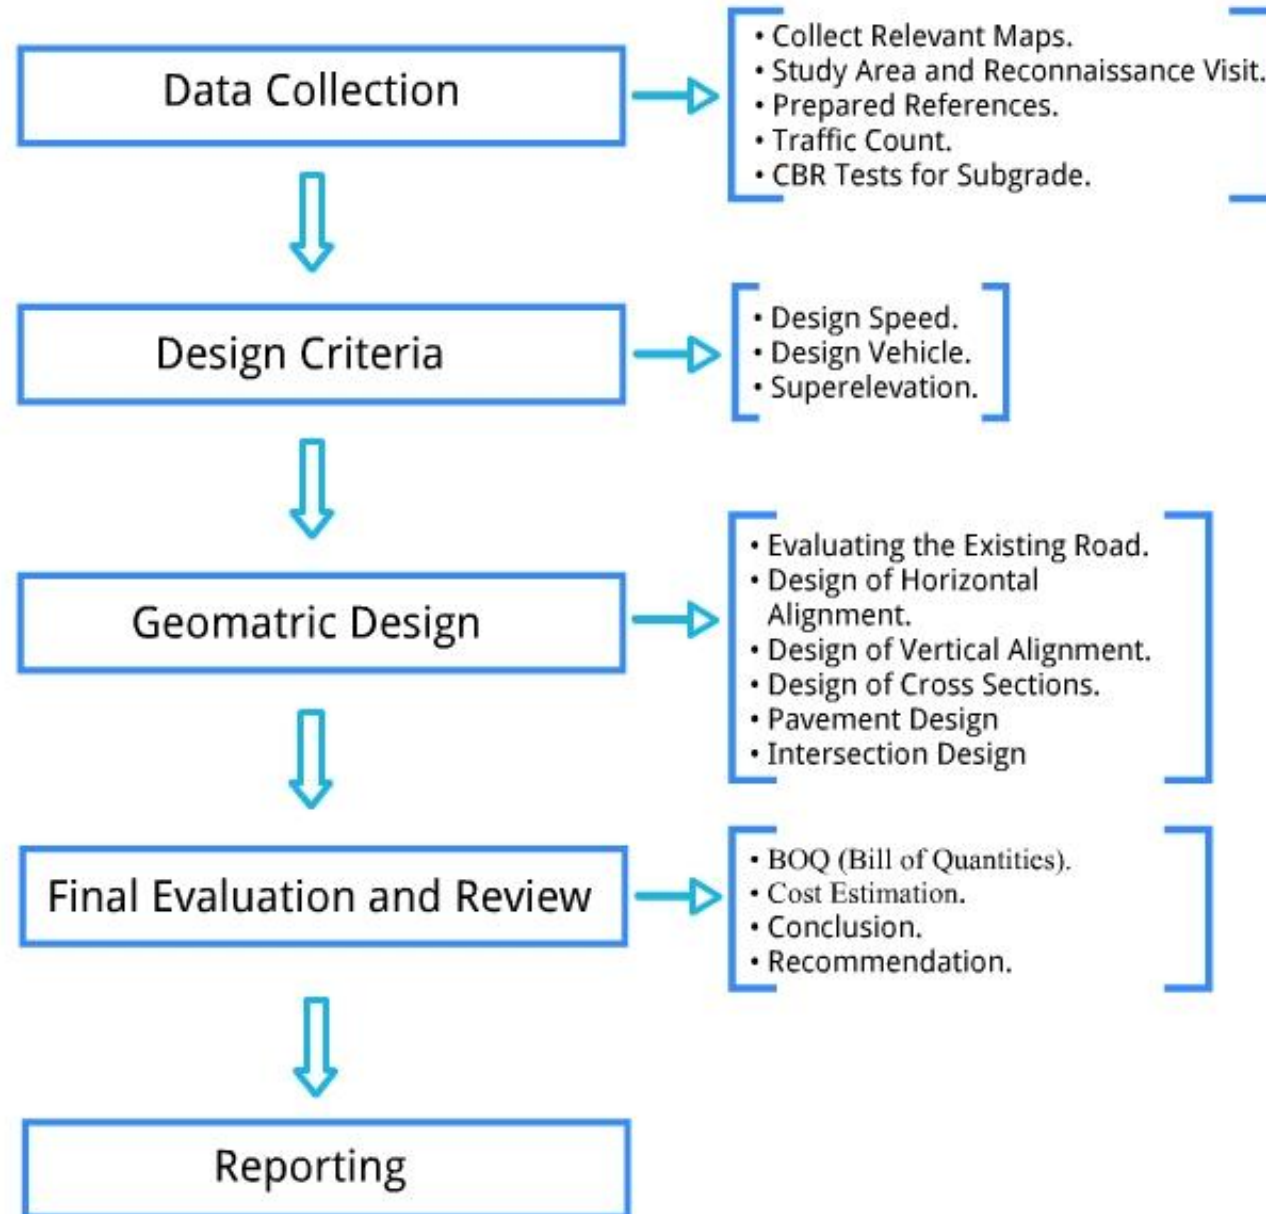

### Geomatic Design

- Evaluating the Existing Road.
- Design of Horizontal Alignment.
- Design of Vertical Alignment.
- Design of Cross Sections.
- Pavement Design
- Intersection Design

### Final Evaluation and Review

- BOQ (Bill of Quantities).
- Cost Estimation.
- Conclusion.
- Recommendation.

### Reporting

# DESIGN CRITERIA

## DESIGN SPEED

Station	Design Speed (Km/hr)	Superelevation	Minimum Radius (m)
(0+000 – 0+370)	50	NON	116
(0+370 – 2+800)	70	6 %	184
(2+800 – 8+200)	50	NON	116
(8+200 – 9+120)	40	NON	70
(9+120 – 9+396)	50	NON	116

# DESIGN CRITERIA

## DESIGN VEHICLE

# WB-20

Height = 4.1 m

Width = 2.6 m

Length = 22.4

m

# DESIGN OF HORIZONTAL ALIGNMENT

# DESIGN OF HORIZONTAL ALIGNMENT

Type of the Curve	Number
Simple curves	26
Compound curves	12
Reversed curves	6

# DESIGN OF VERTICAL ALIGNMENT

## DESIGN OF VERTICAL ALIGNMENT

- Max. Grade → **13 %**

**Note :** All segments match the max grade except the following.

Station	Grade
(0+020 – 1+095)	15.12 %
(7+075 – 7+615)	13.97 %

# DESIGN OF VERTICAL ALIGNMENT

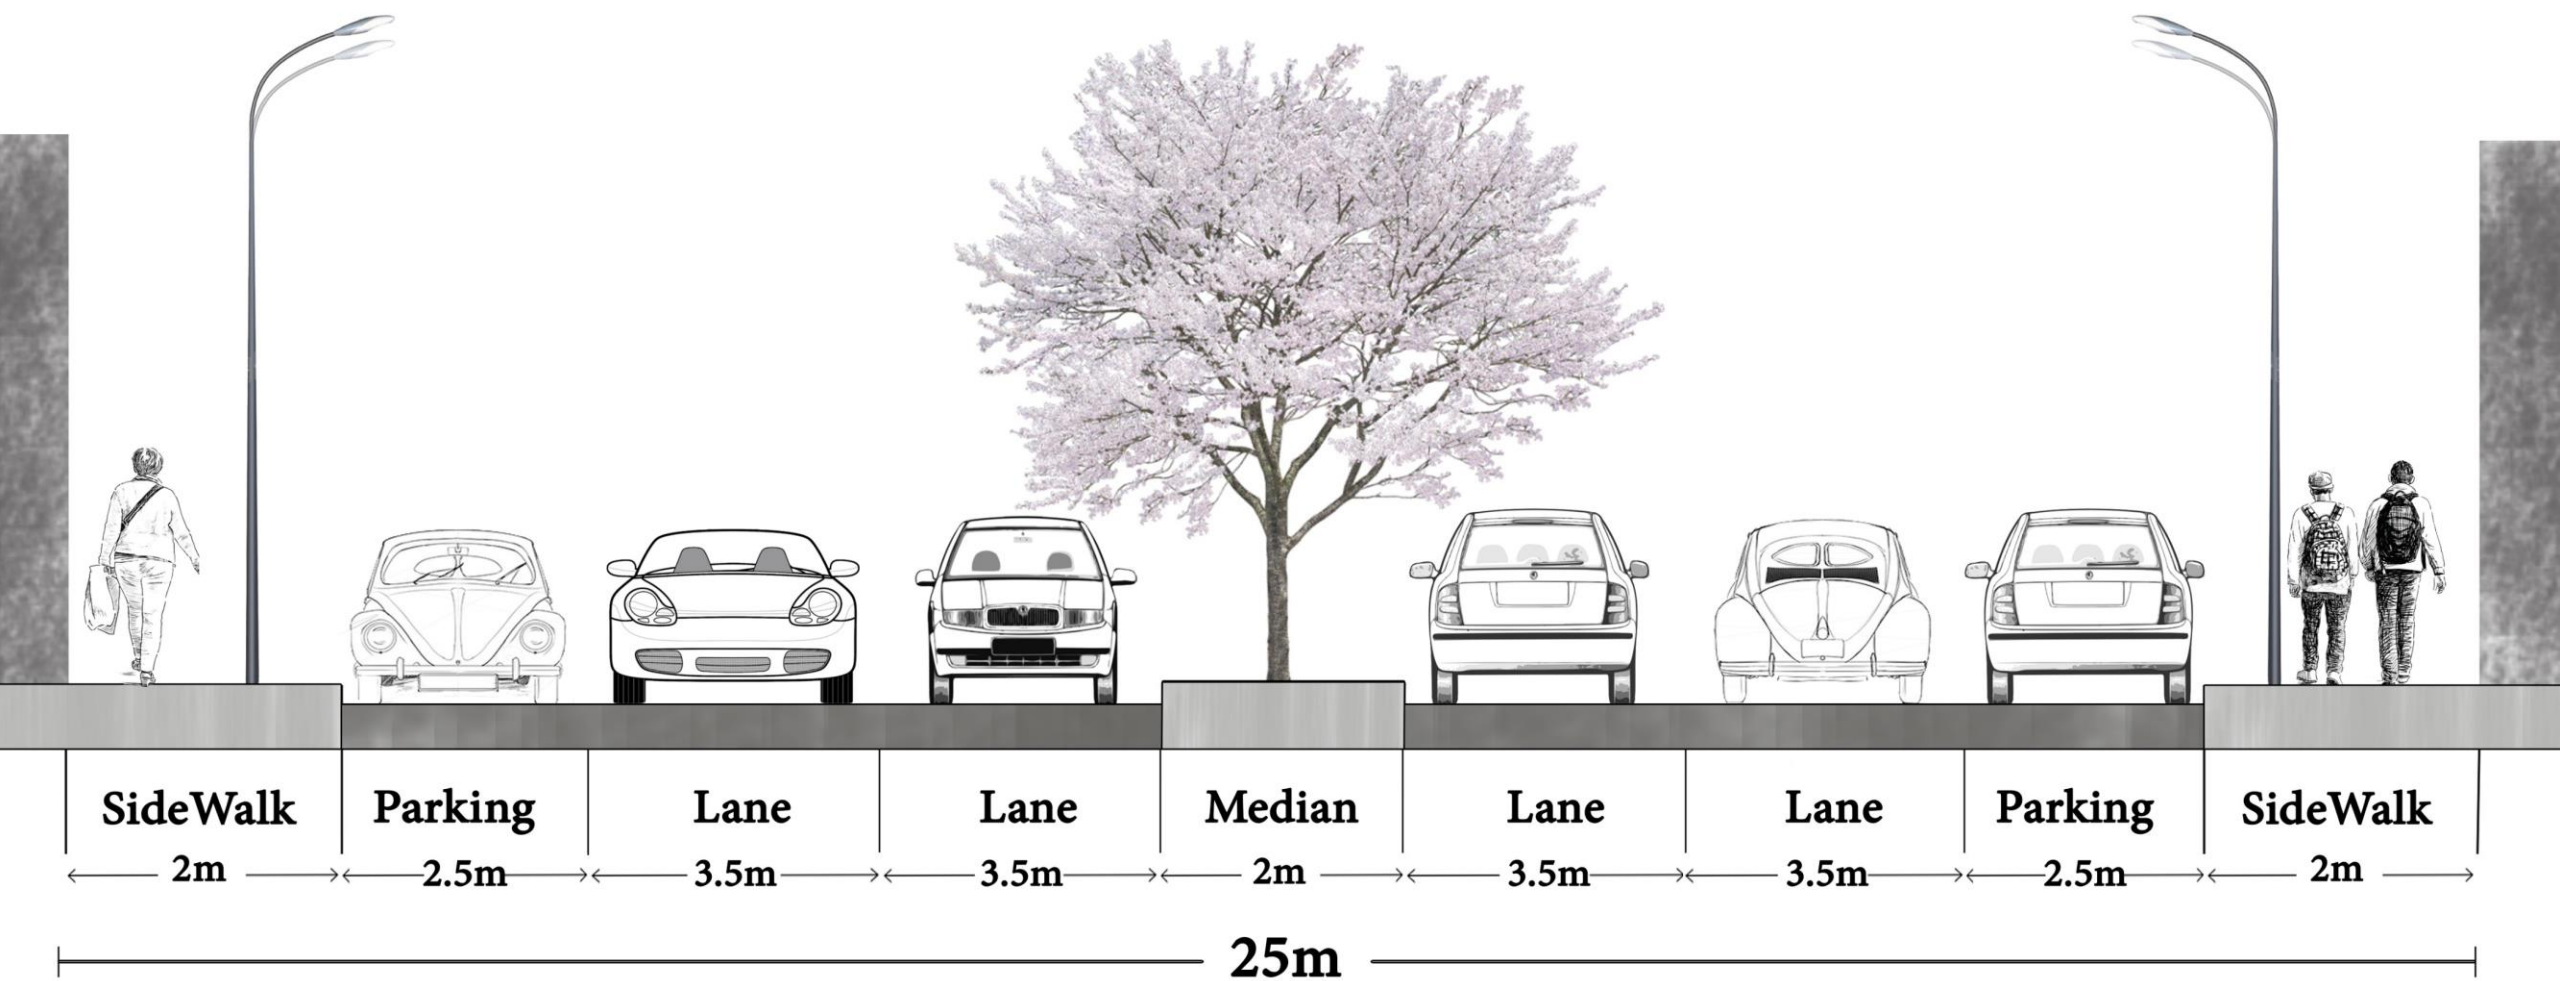

Type of Curve	Minimum K	Number
Crest Curve	<b>SSD</b> for $V = 70 \rightarrow k = 17$ for $V = 50 \rightarrow k = 7$ for $V = 40 \rightarrow k = 4$	9
Sag Curve	<b>HSD</b> For $V = 70 \rightarrow k = 23$ for $V = 50 \rightarrow k = 13$ for $V = 40 \rightarrow k = 9$	9

# DESIGN OF CROSS SECTION

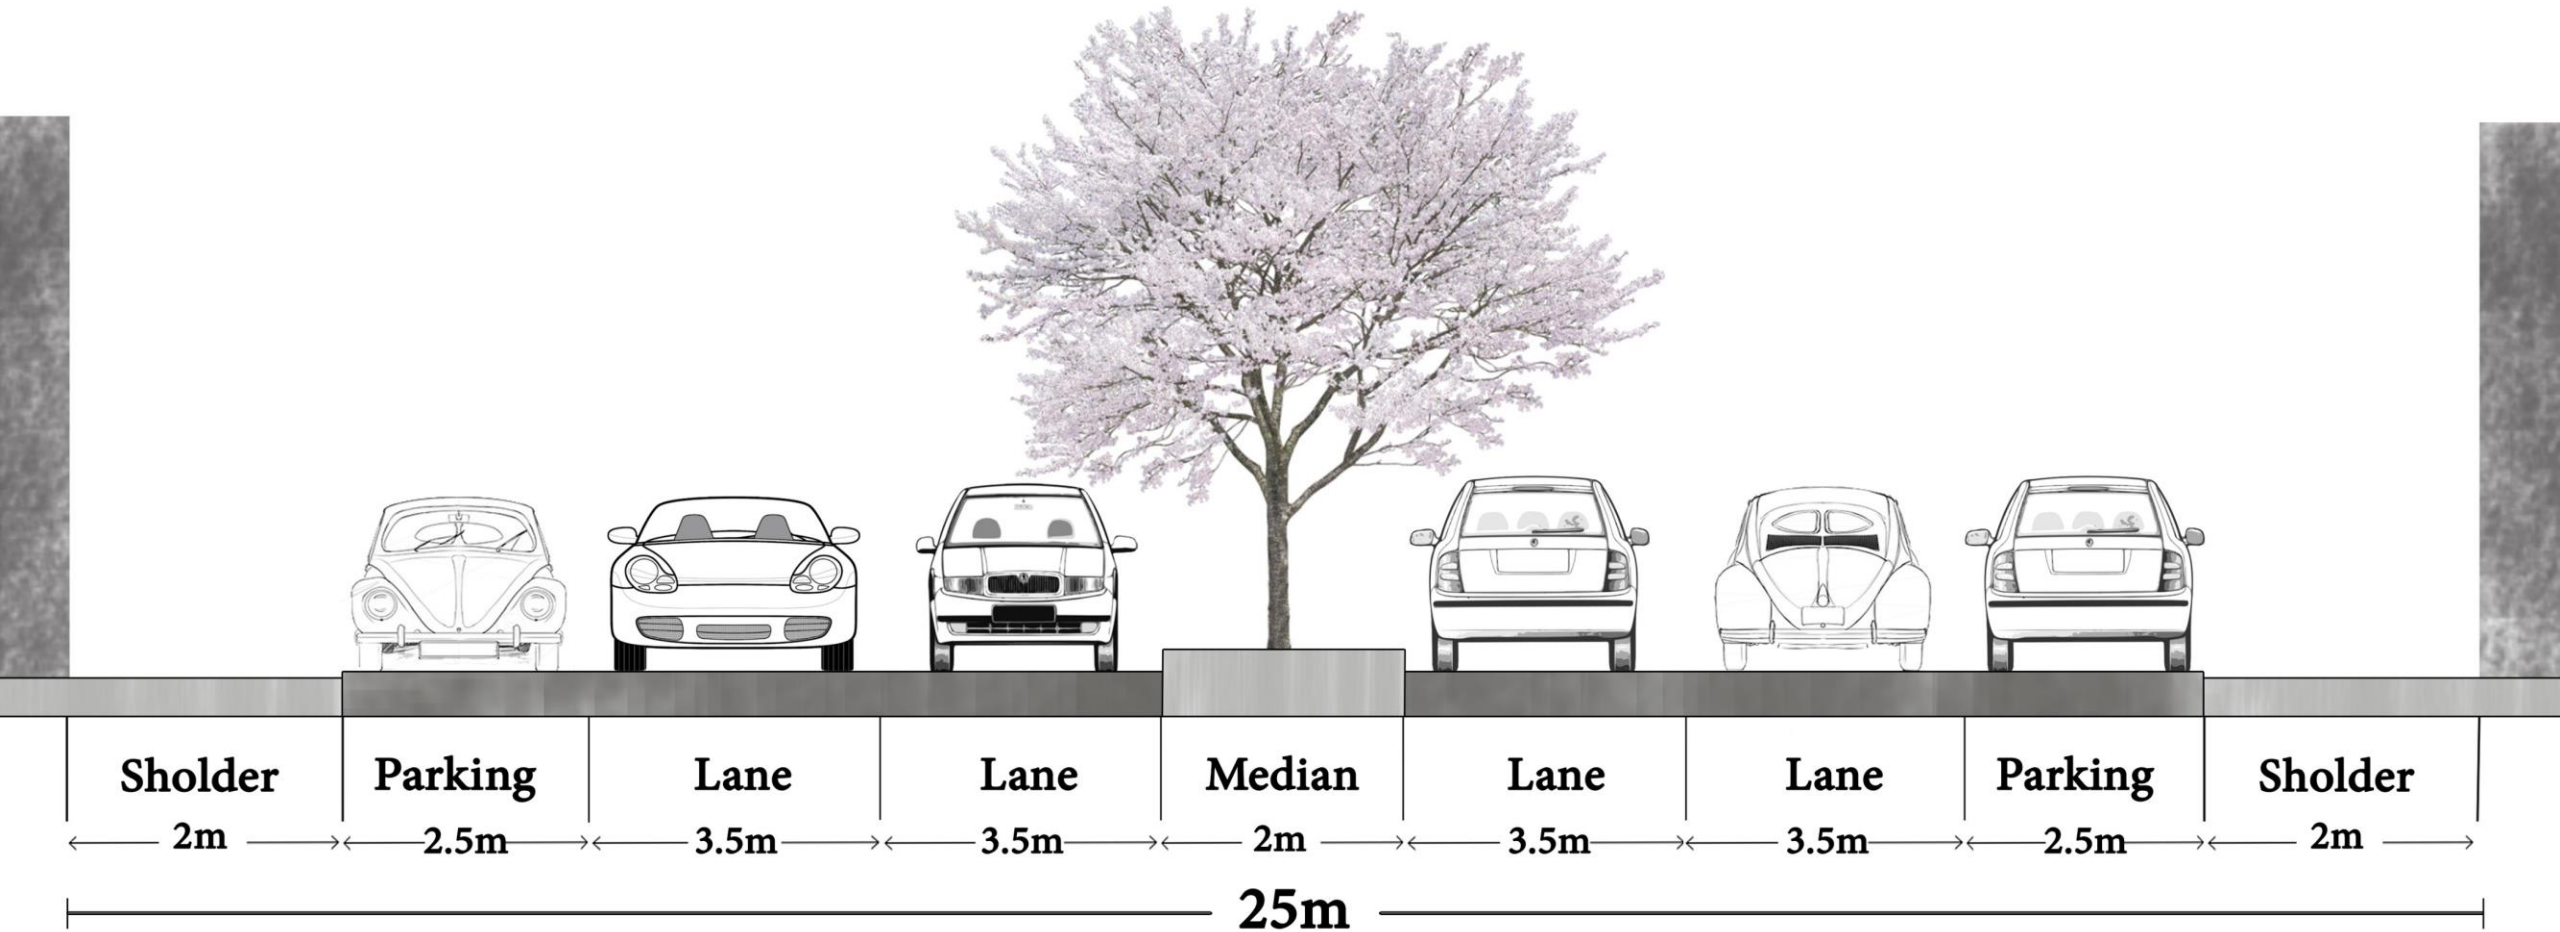

- We have two typical cross section scenarios:

Type of the Cross Section	Station
With Sidewalk ( Typical 1 )	(0+000 – 1+500)
	(7+500 – 9+396)
With Shoulder ( Typical 2 )	(1+500 – 7+500)

**Typical Cross Section 1 ( with Sidewalk )**

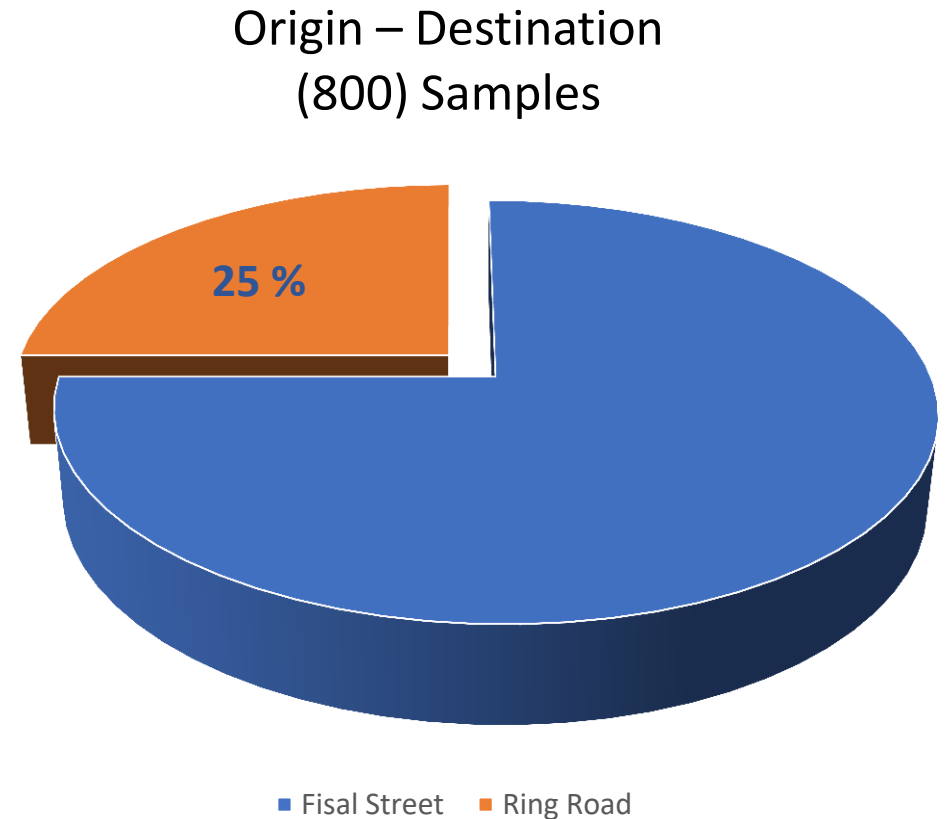

**Typical Cross Section 2 ( with Shoulders )**

# TRAFFIC ANALYSIS

- Current **ADT**(Faisal Street) → **31080 veh/day**
- Percentage (NRR) = 23 % → **Take 25 %**
- Estimation **ADT**(NRR) → **7770 veh/day**
- Design **ESAL** (20 years) → **2.9 Millions**

# TRAFFIC ANALYSIS

## HCS software check:

- Travel lanes number (**N = 2**) → **Satisfied**

RESULTS		
Direction	1	2
Desired level of service	B	B
Flow rate, vp	1393 pc/h	783 pc/h
Free-flow speed, FFS	80.2 km/h	80.2 km/h
Maximum service flow rate allowed for desired LOS, MSF	882 pc/h/ln	882 pc/h/ln
Number of lanes required, N	1.6	0.9
Designers should perform an operational analysis on the possible choices for N.		

# PAVEMENT DESIGN

## CBR Test

# PAVEMENT DESIGN

Sample	CBR Value	Stations Represented
Sample 1 (0+850)	27.4 %	(0+000 – 7+500)
Sample 2 (7+600)	3.8 %	(7+500 – 9+396)

# PAVEMENT DESIGN

**Pavment Layers**

**0+000 – 7+500**

**Pavment Layers**

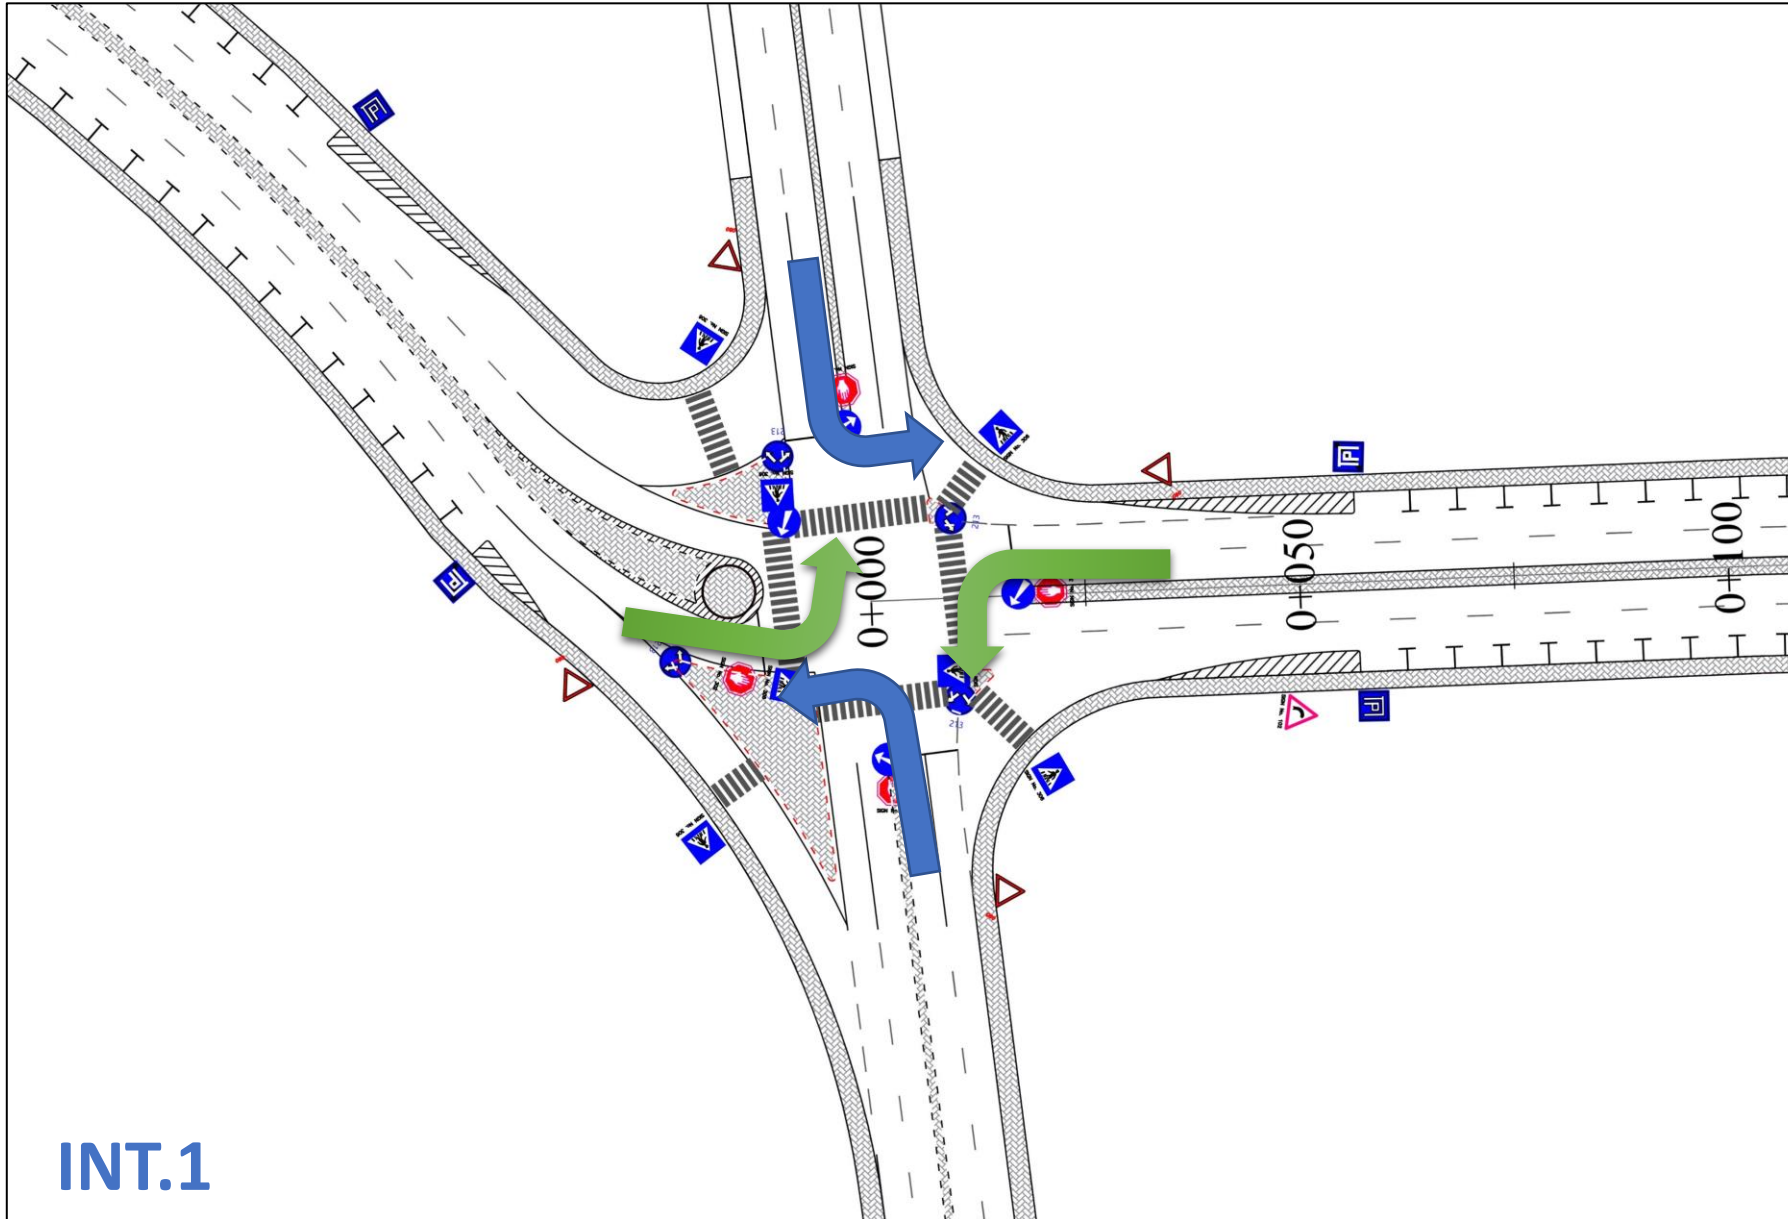

**7+500 – 9+396**

# INTERSECTIONS

# INTERSECTIONS

## **BOQ AND COST ESTIMATION**

<b>Items</b>	<b>Estimation Cost (Million)</b>
<b>Cut &amp; Fill</b>	<b>4.79</b>
<b>Base Coarse</b>	<b>1.41</b>
<b>Sub Base</b>	<b>0.1</b>
<b>Pavement</b>	<b>4.28</b>
<b>Marking</b>	<b>0.22</b>
<b>Paving</b>	<b>1.04</b>
<b>Signing &amp; Cuties</b>	<b>0.07</b>
<b>Walls &amp; Guard Rail</b>	<b>1.2</b>
<b>TOTAL PROJECT COST</b>	<b>13.1 M</b>

## Conclusion

1

Decreasing Congestion and Providing Accessibility

2

The Proposed Route not match AASHTO Classification

3

The design match AASHTO around 90%

4

In high fill segments, we need layers of Rock Block

5

The Current Solutions aimed at reduction the Traffic Jam

# **RECOMMENDATIONS**

- **It is recommended to consider the other alternative modified route for the entrance of the road in order to work 4-legs intersection.**
- **Nablus Municipality is encouraged to attain the needed funds to construct the whole Ring Road.**
- **Redesign intersections after street operating.**
- **Reorganizing the area around the Road especially at the End .**

# **RECOMMENDATIONS**

- **Complete all parts of the project surround Nablus-City.**
- **Select the projects that are in the priory and short list according to the strategic plan.**
- **Design a proper drainage system in order to avoid acceptable future problems in the road layers.**
- **Design the thickness of the concrete walls.**

# **RECOMMENDATIONS**

- Prevent the placing of grafts in the street area.

# **RECOMMENDATIONS**

- **Check Current House Levels And Stabilize Street Levels.**

## DISCUSSION

*We Are Ready..  
you can Ask !!*
