! The Problem

Traditional accounting systems are complex and rely heavily on accountants. Most employees become passive data providers, and this leads to slow workflows, miscommunication, and frequent errors.

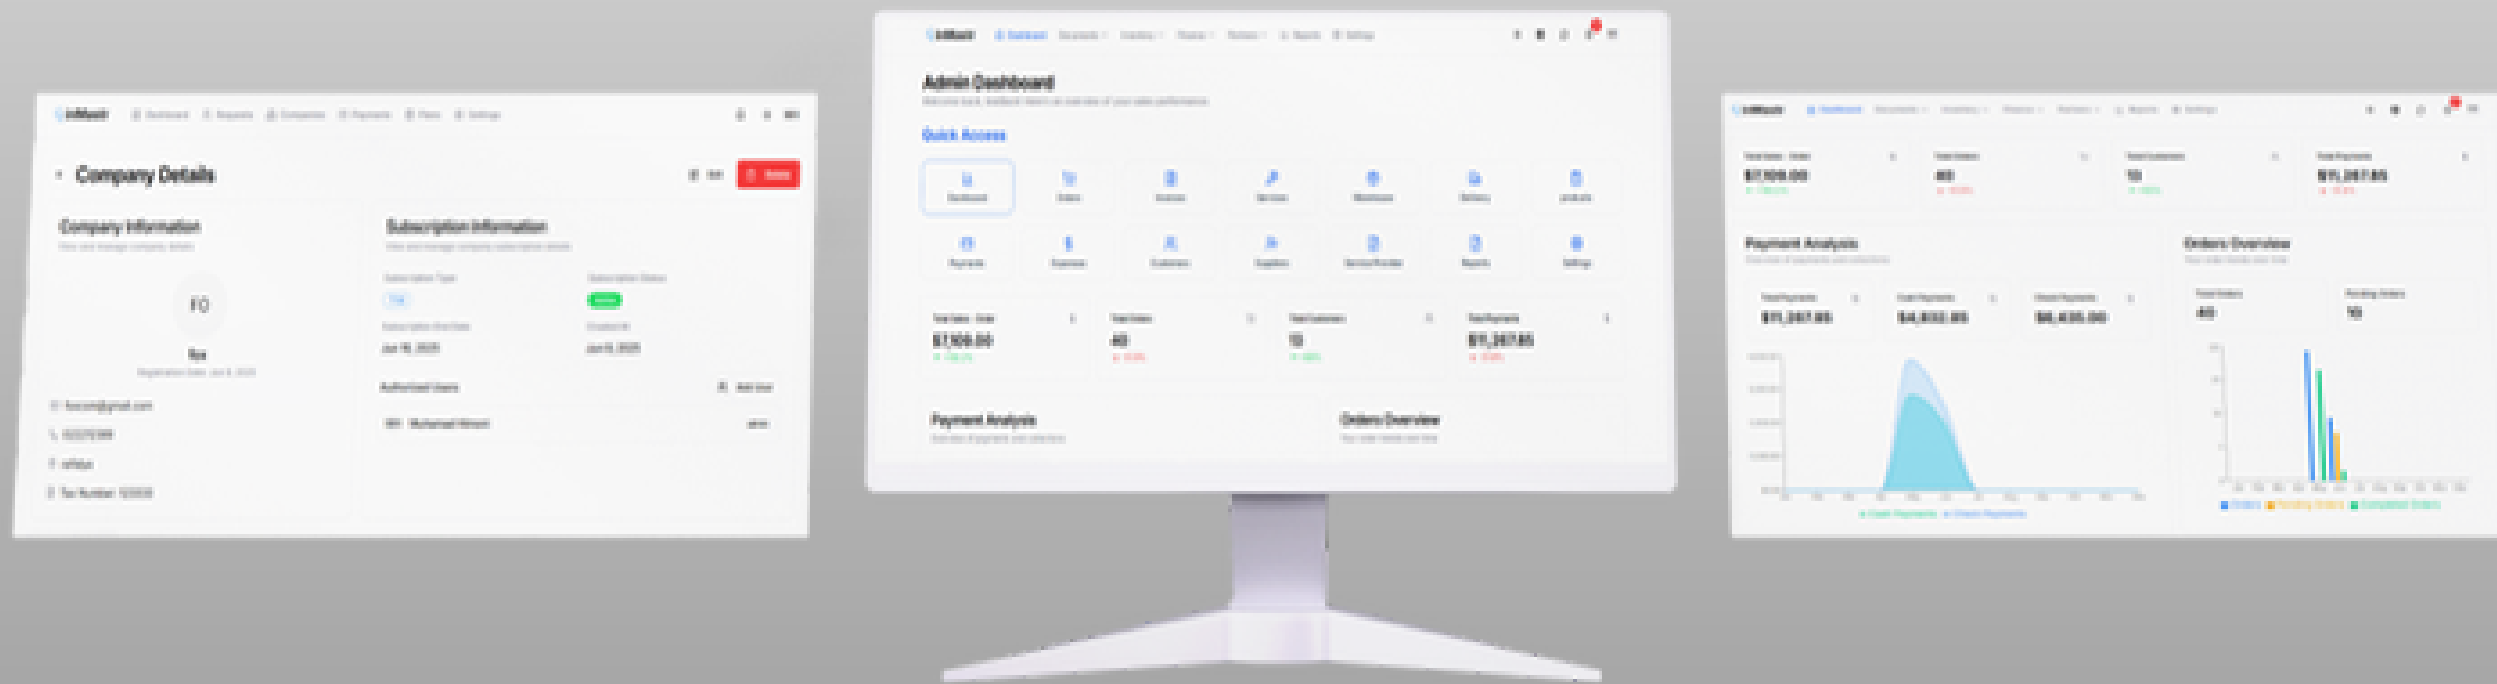

Our Solution

FineMaster empowers each employee to manage their tasks—drivers record deliveries, sales reps create orders, and managers track operations in real time. This improves accuracy, saves time, and increases accountability across the company.

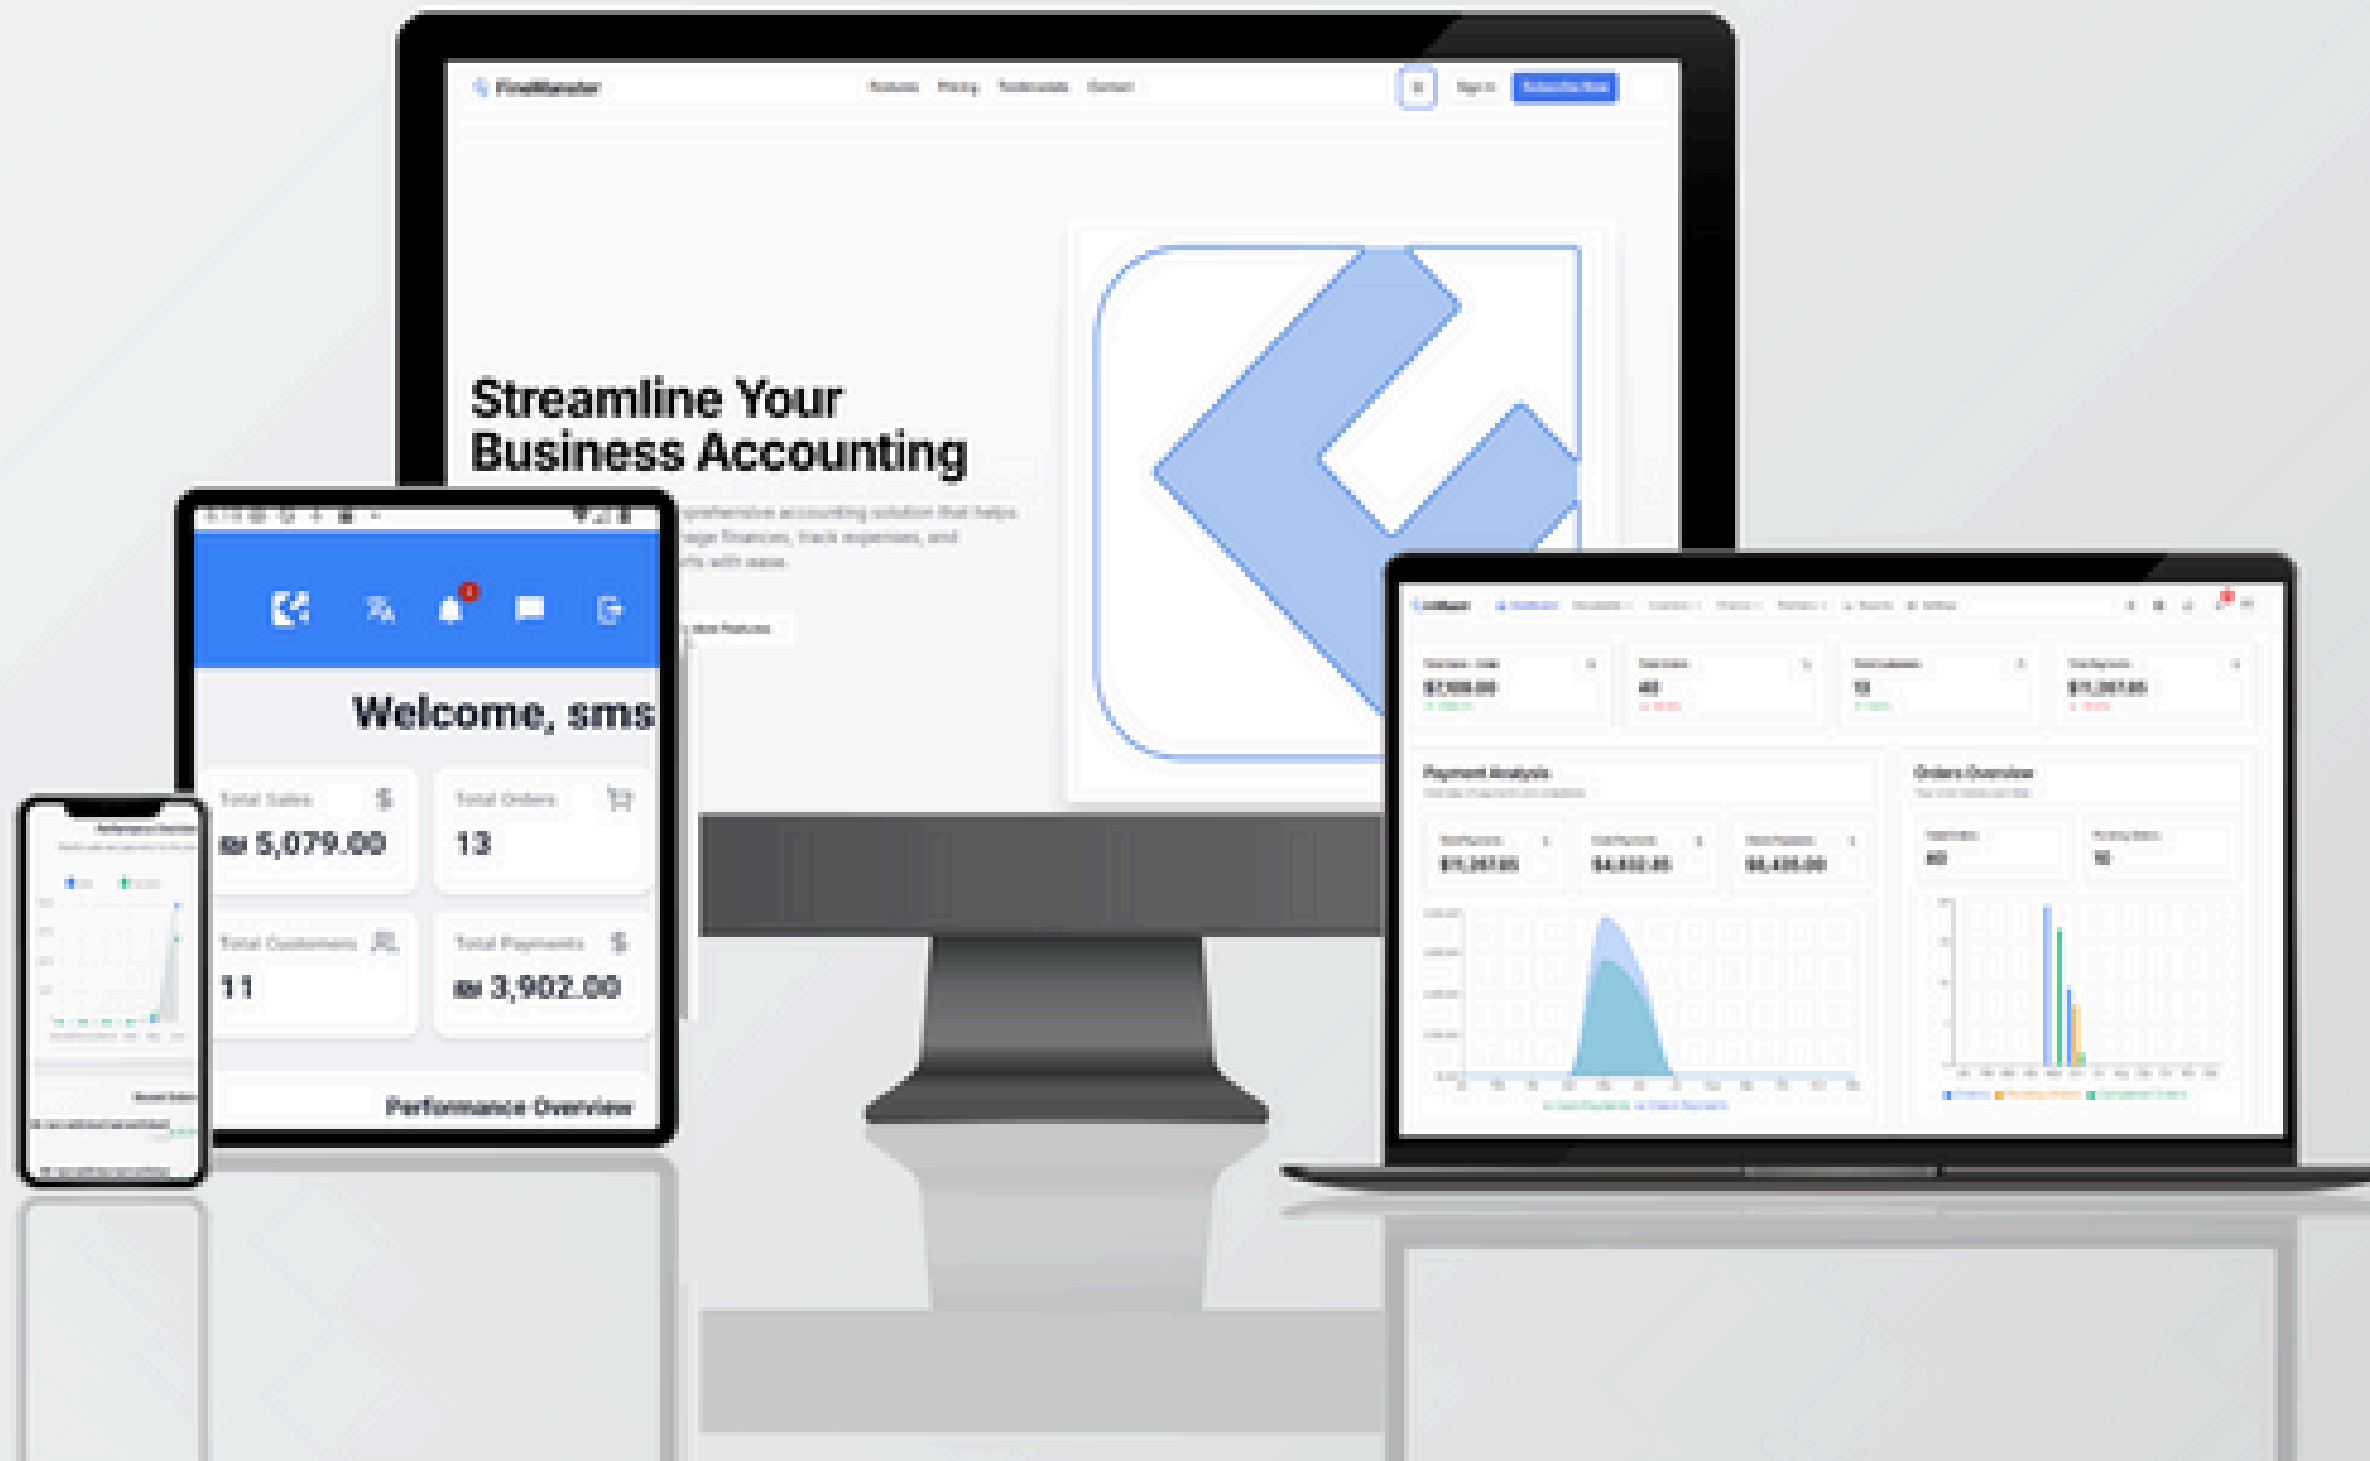

What is FineMaster?

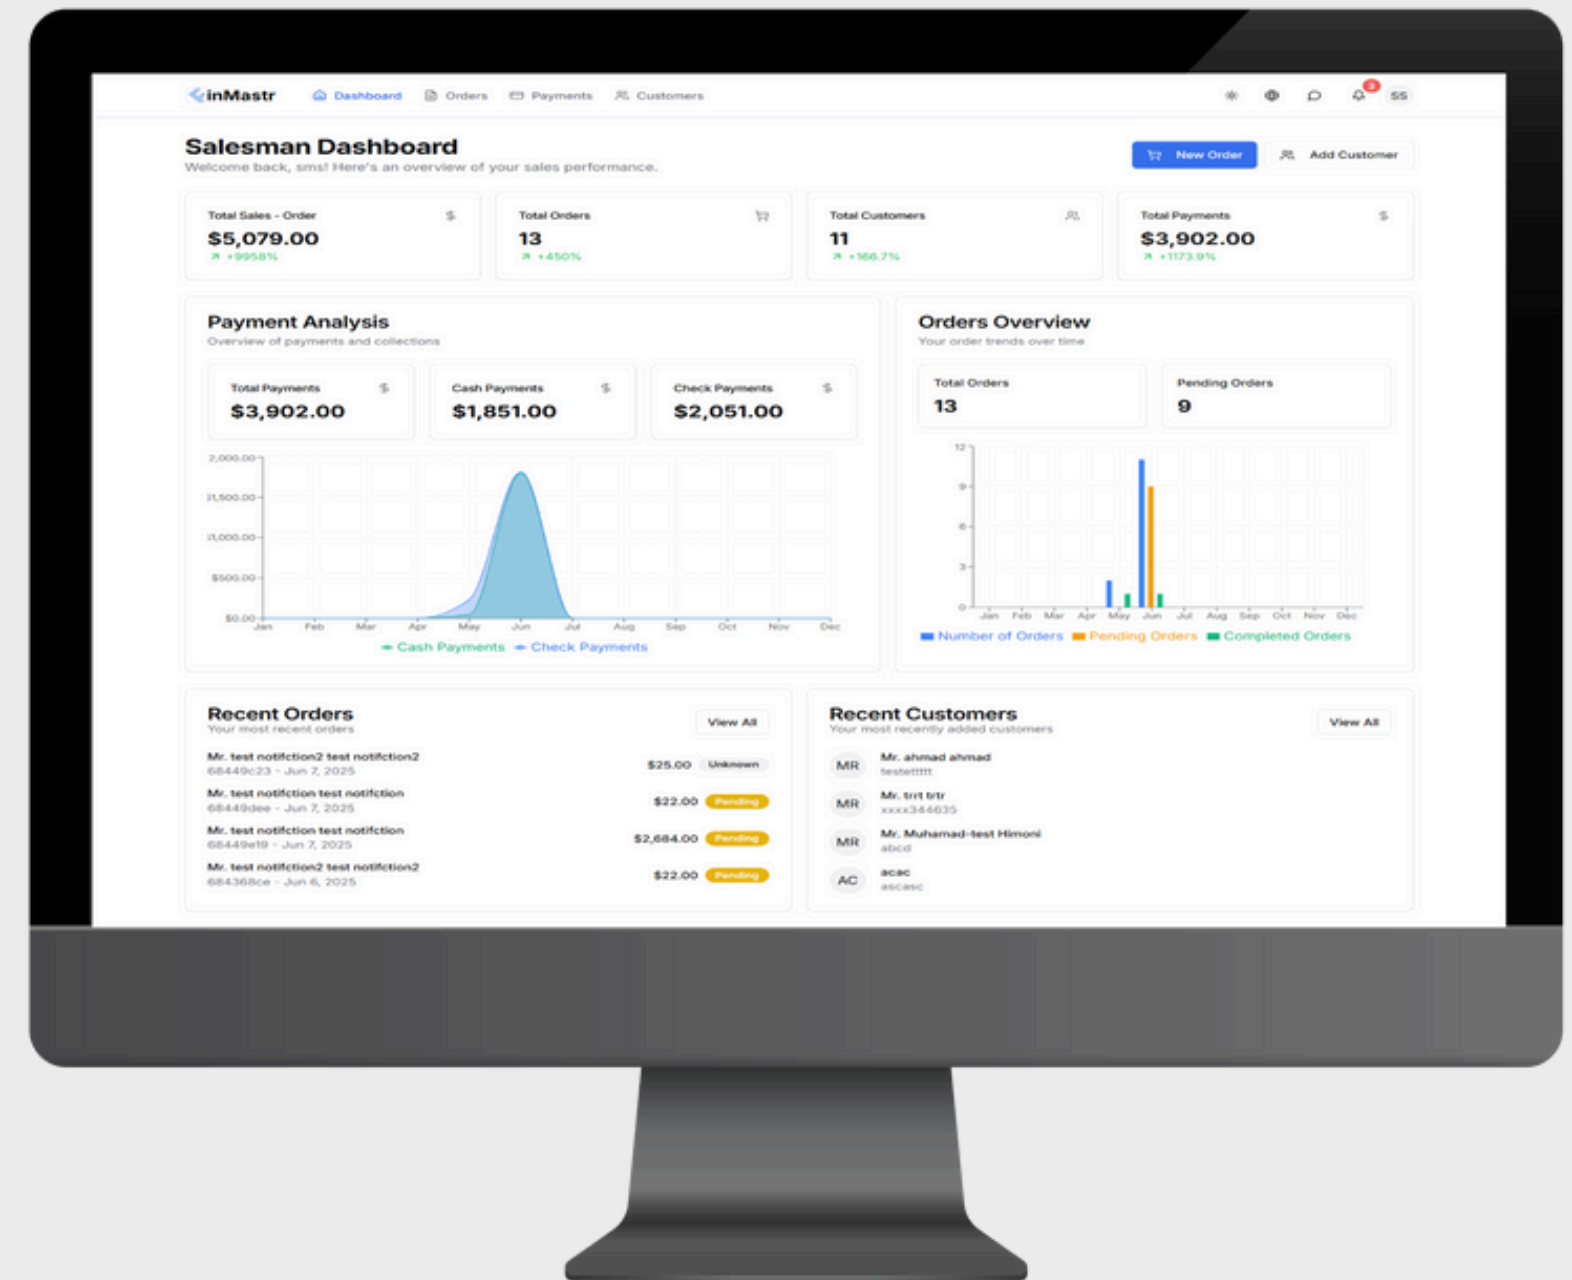

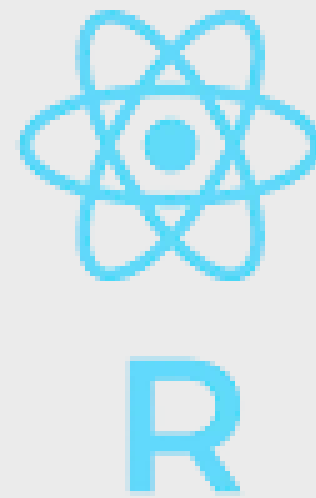

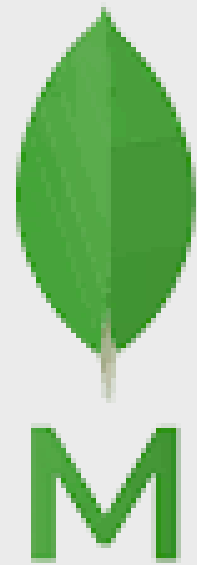

FineMaster is a modern accounting and business management system designed for companies of all sizes. It simplifies daily operations with an intuitive interface, multilingual support, and role-based access for every employee.

Company Roles

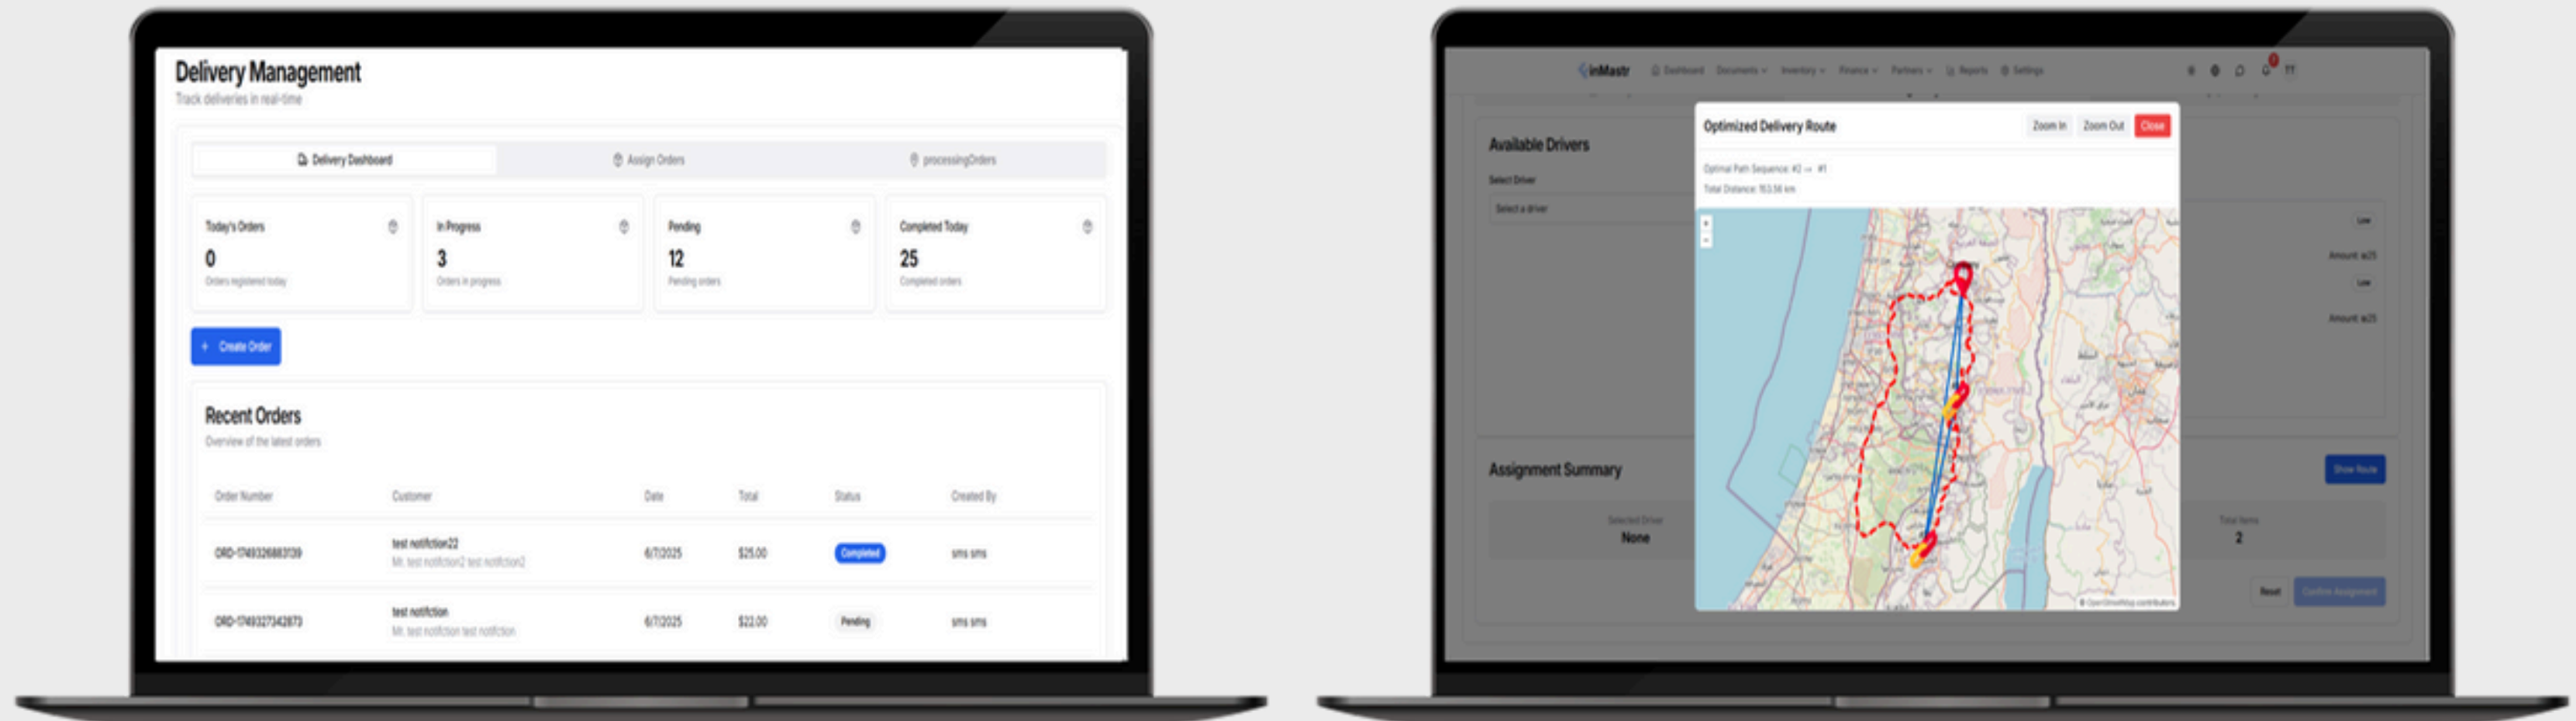

Admin Role

The Admin has full access to all system modules and settings, acting as the central manager of the company's operations.

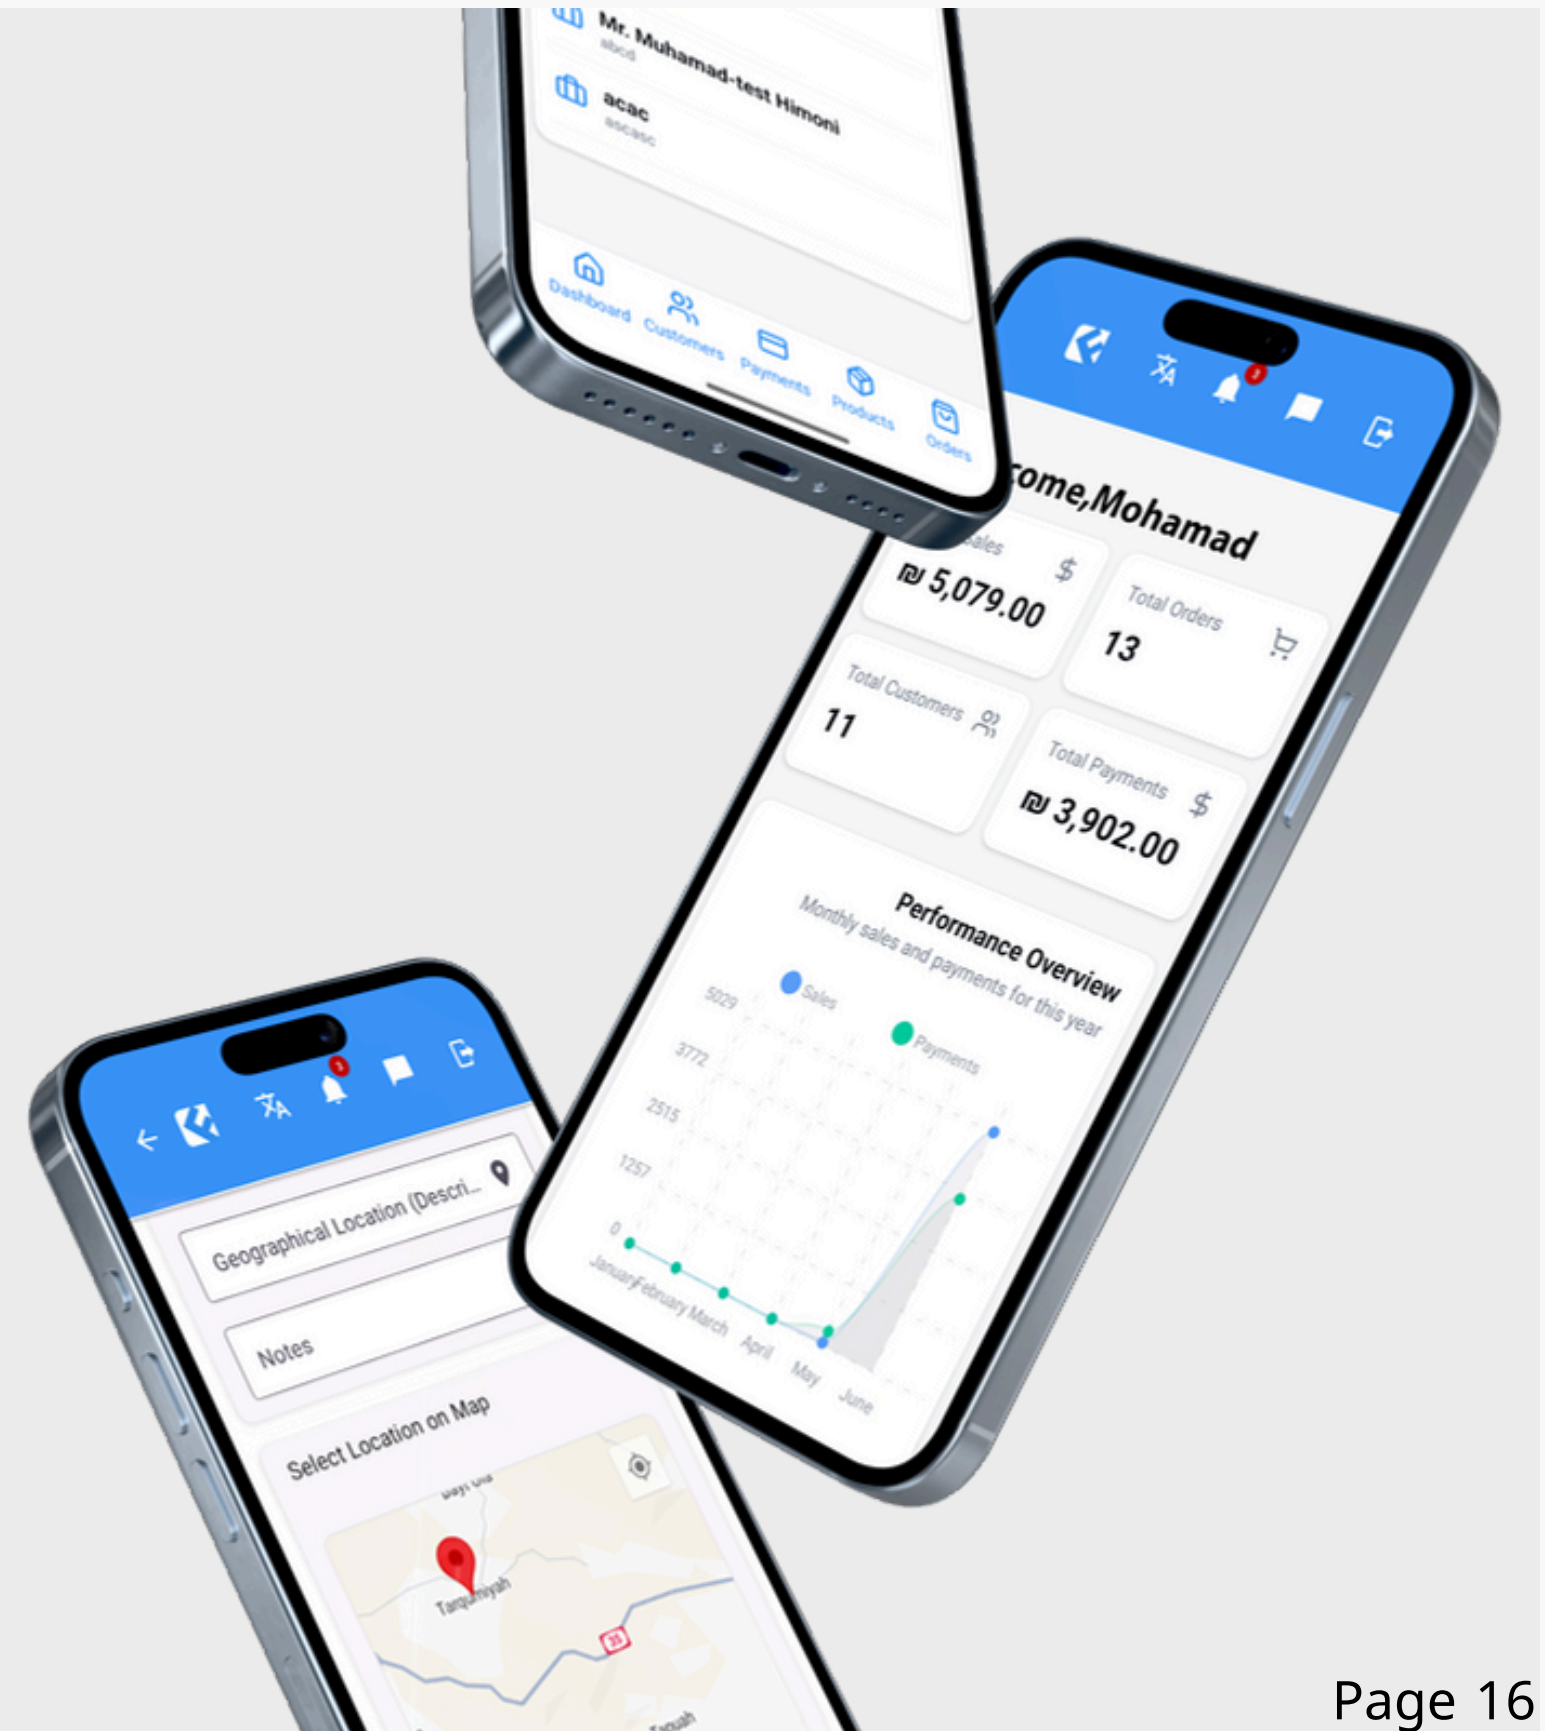

Warehouse keeper

The Warehouse Keeper manages inventory and monitors daily stock movements. They handle order processing and coordinate deliveries with drivers.

Sales Man

The Salesman handles customer relationships, creates orders, and records payments. They operate through both web and mobile apps to manage tasks efficiently on the go.

Driver

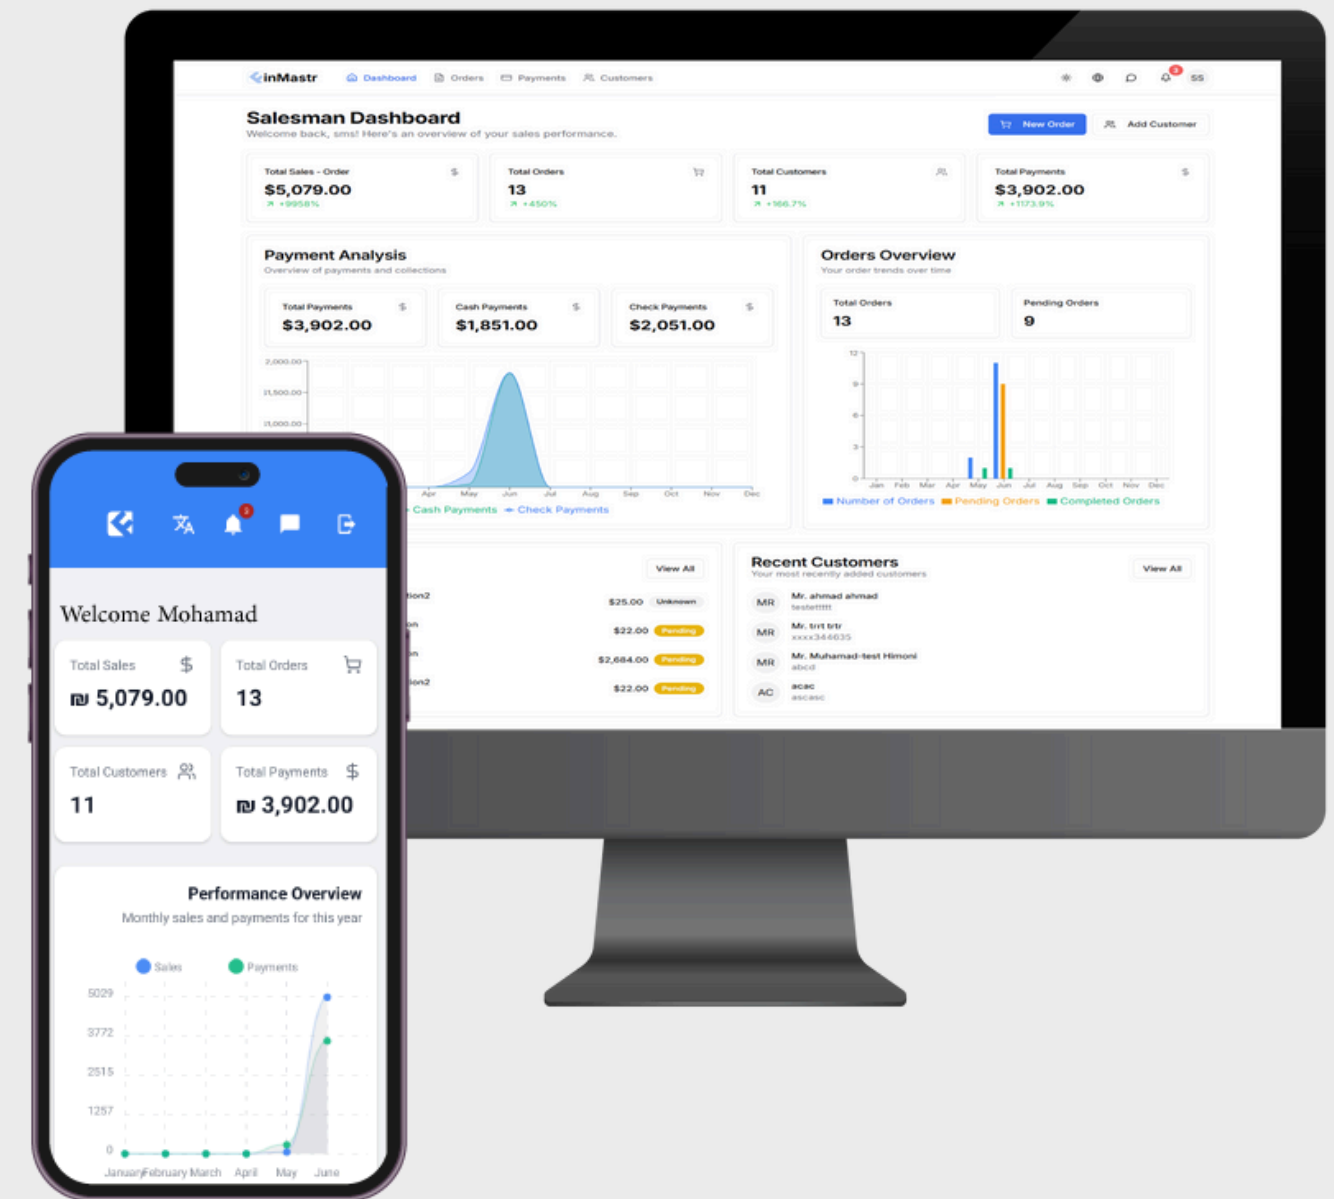

The Driver manages assigned deliveries and updates order statuses in real time. They can access delivery details and confirm completions via web or mobile app.
