INTRODUCTION

Where is the Idea come from?

Shopping in Palestine can be seen as a stressful process for a bunch of reasons :

Customers :

- ❖ difficulty finding the products they want specifically.
- ❖ difficulty browsing products that are available in different shops.
- ❖ Not being aware of shops that might suit their interest.
- ❖ Shopping from different shops for different items is harder than it should be.

Shop Owner :

- ❖ Their products that are available at the current time, are known to customers only when they visit them or contact them.
- ❖ Their shop and products might be unfamiliar to a large amount of people that might actually like their shop's product.
- ❖ Offers and Announcements might go unnoticed for a lot of customers.

objectives

What are the objectives that we want to achieve with our application ?

For Customers :

- ❖ Customers should have an idea about a shop's products and their prices.
- ❖ Customers should have products available to them at any time so they could browse whenever they want.
- ❖ Customers should be aware of shops that might suit their interest.
- ❖ Customers should have an easy and comfortable process of ordering these products.

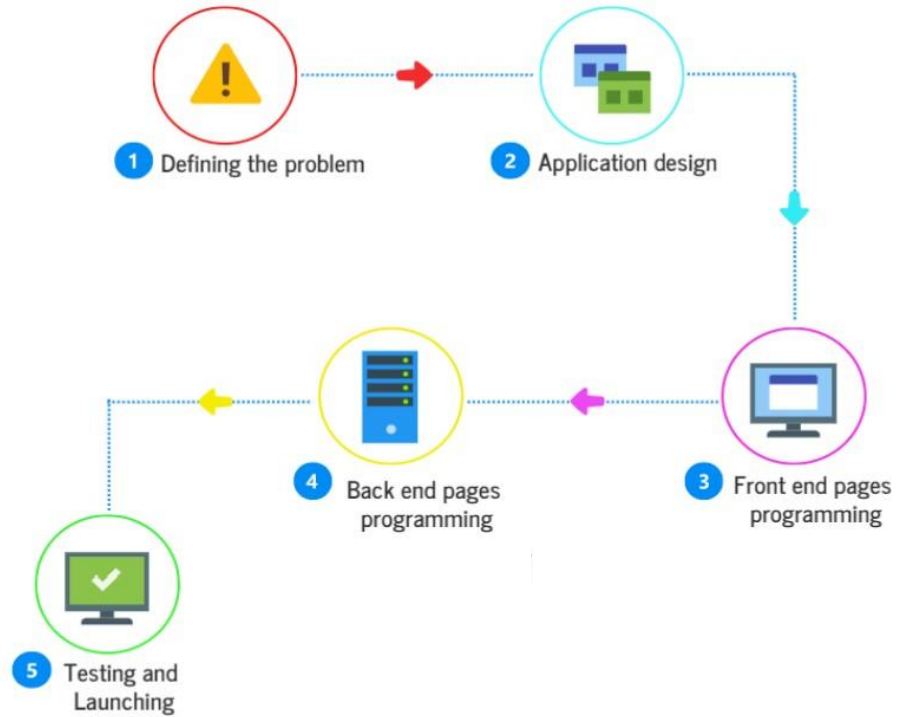

In short our objective for customers is an easy and convenience way of shopping

For Shop Owners :

- ❖ Shop owners should be able to display their products that are available for sale at any time a customer wants to browse them.
- ❖ Shop owners should have the ability to display their products and have the opportunity to gain customers that are browsing the application to find something of their interest.
- ❖ Shop owners should have the ability to make announcements and offers available for customers to see.

In short, our objective for shop owners is to match them with customers whose shops' products are in the interest of these customers.
