

### ***3) Idiopathic Hypertrophic Pachymeningitis presenting with hydrocephalus in a child***

**Aburahma, Samah Khalil**

**Presenter: AbdelGhani Mazen Anabtawi, intern, Alwatani hospital**

#### **Summary**

Idiopathic hypertrophic pachymeningitis (IHP) is a rare but increasingly recognized disorder with localized or diffuse thickening of the dura mater of unknown etiology. The inflammation usually involves the cranial or spinal dura mater, with resultant neurological deficits. It has been primarily reported in adults, with focal involvement of the brain or spinal cord. We report a child who presented at the age of 3.5 years with IHP involving the whole neuraxis, with poor response to steroids, cyclophosphamide and intraventricular Cytarabine

### ***4) A 9 month old infant with coma, hyperglycemia and ketoacidosis. What is the diagnosis?***

**Dr. Imad M Dweikat, Metabolic Disease Specialist, Makassed hospital, Jerusalem**

**Presenter: Dr. Najwan Abu Gharbieh, Pediatric Resident, Makassed Hospital / Jerusalem**
