

Smart Home

A smart home is a concept that refers to a home that is improved and equipped with modern technology to make it more comfortable, safe and efficient. A smart home involves the use and remote control of smart devices over the Internet, such as smart lighting, monitored HVAC, and security devices such as security cameras. Artificial intelligence is also applied in the smart home, giving the user the ability to interact with the home more efficiently, whether through voice control or mobile applications. In addition, the smart home can learn the user's habits and preferences to more effectively meet their needs, save energy and water, and improve the quality of life inside the home. In sum, a smart home is an innovative technology that contributes to improving the lifestyle of individuals and making the home more efficient and comfortable
