

### **Abstract**

In this study we aimed to formulate a pure herbal shampoo and, to evaluate and compare its physicochemical properties with the marketed shampoos. The herbal shampoo was formulated by using pure extract of Wheat seeds. Several tests were performed to determine its physicochemical properties of both prepared and marketed shampoos like pH, foaming ability and stability, rheological behavior, anti-microbial etc. The prepared shampoo and showed good foaming ability also, it showed anti-microbial activity against gram positive microorganisms. The result indicated the prepared shampoo is having good antimicrobial activity.
